

Dear readers,

12th annual volume of the Statistical Yearbook of the Slovak Republic brings you statistical information in the form and structure as in the previous years.

This year the publication is supplemented with actual information, from which I want to draw your attention to publishing of basic indicators from two extensive census, which were realised by the Statistical Office of the SR in 2001.

The first one was the Housing and Population Census. Selected indicators from the census are included mainly in subchapter Population, some of them in other corresponding parts. Unique data e.g. population by religion, some data on number and structure of households, on the state of dwelling fund are surveyed within the framework of given census and are available only once per 10 years.

The second big census, which was realised for the first time in accordance with the standards of the European Union, was the Farm Structure Census. Selected indicators from the census are included in the subchapter Agriculture. They are the figures on structure of farms, labour forces and agricultural equipment.

Publication contains the results of elections to the bodies of self-government regions in 2001 and actually also the results of elections to the National Council of the Slovak Republic in 2002.

In comparison with previous volumes the subchapter National Accounts was substantially revised, some small changes were made in subchapters Research and Development, Social Security, International Surveys. Reduced volume is in subchapters Energetics, Fixed Assets and Industry.

The Statistical Yearbook of the Slovak Republic is yearly the work result of the staff of the

Statistical Office of the SR, some ministries and other organizations as well as the publishing house VEDA, which issues and distributes the yearbook. Thanks for made work belongs to all of them.

Distribution of the Statistical Yearbook of the Slovak Republic 2002 and CD-ROM, which is a part of the book publication, is provided by VEDA, publishing house of SAV, Bradáčova 7, 852 86 Bratislava 5, tel./fax ++4212/63 83 22 59.

The users' comments in preparation of the statistical yearbook help us and we thank them for it. Further comments and proposals are welcome to improve quality of the publication. You can send them to our address: Statistical Office of the Slovak Republic, Miletičova 3, 824 67 Bratislava 26.

Notice

Unless otherwise specified in the text heading or a legend to the table, region the data refer to (country, district etc.) is the territory of the Slovak Republic.

Unless otherwise specified in the table heading or a legend to the table, size of published data file, the data refer to the economy of the SR in total including imputation for the organizations up to 19 employees, tradesmen or population.

As far as data by certain classifications are concerned (e.g. Branch Classification of Economic Activities, Standard International Trade Classification etc.), the English text of indicators not always corresponds to a literal translation of the Slovak text but is given according to the diction of the foreign classifications or is given in the abbreviated form.

Names of countries are given in abbreviations, that are not always in compliance with official full names of the countries.

Differences in sums and ratios result from rounding data off. Unless stated otherwise explicitly, published data are definitive.

Explanations to symbols

Macron (–)	in the place of a number denotes that the phenomenon did not occur
Zero (0,0 0,00)	denotes the magnitude more than zero but less than the least unit expressible in the table
Dot (•)	in the place of a number denotes that the figure is not available or reliable
Cross (x)	means that the entry is not possible for logical reasons
Capital I (I)	means that it is not possible to publish the figure because of its individual character
Break symbol (↘)	means that the comparability of data series is cut off due to methodology or another reason

START

II.1 National accounts

II.2 Finance

II.3 Prices

II.1 National accounts

- II.1–1. Gross domestic product
- II.1–2. Selected macroeconomic indicators in 2000
- II.1–3. Selected macroeconomic indicators in 2001
- II.1–4. Selected macroeconomic indicators – deflators
- II.1–5. Gross domestic product by economic activities in 2000 and 2001
- II.1–6. Value added by size structure of enterprises
- II.1–7. Gross output by size structure of enterprises
- II.1–8. Distribution and use of income in sector of households
- II.1–9. Gross domestic product by output, income and expenditure approach
- II.1–10. Balancing items of national accounts in the Slovak Republic
- II.1–11. Distributive transactions for institutional sectors
- II.1–12. Main components of non-financial assets for institutional sectors
- II.1–13. Financial transactions
- II.1–14. Gross output from supply and use tables by branches
- II.1–15. Intermediate consumption from supply and use tables by branches
- II.1–16. Gross value added by economic activities from supply and use tables
- II.1–17. Final consumption from supply and use tables by commodities
- II.1–18. Compensation of employees from supply and use tables by branches
- II.1–19. Gross fixed capital formation by selected economic activities
- II.1–20. Gross fixed capital formation from supply and use tables by commodities
- II.1–21. Gross operating surplus from supply and use tables by branches

II.2 Finance

- II.2–1. Revenues and expenditures of general government budgets
- II.2–2. Revenues and expenditures of local budgets
- II.2–3. Structure of revenues and expenditures of the state budget by type
- II.2–4. Structure of revenues and expenditures of the state budget by flows
- II.2–5. Balance of revenues and expenditures of the state budget
- II.2–6. General government debt as of Dec. 31
- II.2–7. Revenues and expenditures of state funds
- II.2–8. Revenues and expenditures of the health insurance companies
- II.2–9. Insured under the health insurance companies as of Dec. 31
- II.2–10. Revenues and expenditures of the Social Insurance Agency
- II.2–11. Insured under the Social Insurance Agency as of Dec. 31
- II.2–12. Revenues and expenditures of the National Labour Office
- II.2–13. Payers to the National Labour Office – as of Dec. 31
- II.2–14. Selected indicators on non-financial corporations by size structure of enterprises
- II.2–15. Selected financial indicators of non-financial corporations
- II.2–16. Assets and liabilities of the National Bank of Slovakia as of Dec. 31
- II.2–17. Assets and liabilities of commercial banks as of Dec. 31
- II.2–18. Monetary survey in actual exchange rate
- II.2–19. Balance of payments of the Slovak Republic
- II.2–20. Detailed capital account of balance of payments of the Slovak Republic

- II.2–21. Average interest rates of interbank credits
- II.2–22. Average interest rates of deposits and credits by sectors in 2001
- II.2–23. Summary of credits and deposits as of Dec. 31
- II.2–24. Summary of population deposits as of Dec. 31
- II.2–25. Average foreign exchange rates (midpoint)
- II.2–26. Foreign exchange position of the bank sector towards abroad as of Dec. 31
- II.2–27. Banking sector
- II.2–28. Capital market
- II.2–29. Foreign direct investments into the Slovak Republic as of Dec. 31
- II.2–30. Foreign direct investments into the Slovak Republic by country of investor and by selected economic activities as of Dec. 31
- II.2–31. Direct investments of the Slovak Republic abroad by country as of Dec. 31
- II.2–32. Direct investments of the Slovak Republic abroad by country and selected economic activities as of Dec. 31
- II.2–33. Financial indicators on investment companies and funds
- II.2–34. Assets and liabilities of investment companies and funds as of Dec. 31
- II.2–35. Insurance companies in the insurance market
- II.2–36. Premium fixed by the law
- II.2–37. Settled claims
- II.2–38. Revenue and expenditures of supplementary pension insurance companies
- II.2–39. Number of contracts, insured and beneficiaries in supplementary insurance companies

II.3 Prices

- II.3–1. Development of price indices (annual averages)
- II.3–2. Industrial producers price indices in selected sections CPA
- II.3–3. Industrial producers price indices by the Classification of Products by Activity (CPA)
- II.3–4. Average prices of agricultural products
- II.3–5. Price index of agricultural products
- II.3–6. Consumer price indices
- II.3–7. Cost of living indices of employees
- II.3–8. Cost of living indices of pensioners
- II.3–9. Average consumer prices of selected products

III.1 Territory and Climate

III.2 Population

III.3 Labour Market

III.4 Fixed Assets

III.5 Research and Development

III.6 Organizational Structure of the Economy

III.1 Territory and Climate

- III.1–1. Area, borders and surface of the Slovak Republic in 2001
- III.1–2. Location of the Slovak Republic's territory
- III.1–3. Maximum distances on the area of the Slovak Republic
- III.1–4. Meteorological data from selected monitoring stations
- III.1–5. Hydrological data
- III.1–6. Main rivers in the Slovak Republic, their basins and length of bordering water courses
- III.1–7. Mountains

III.2 Population

- III.2–1 Population by population census in 1869 – 2001
- III.2–2. Basic indicators from the housing and population census in 1961 – 2001
- III.2–3. Basic indicators from the housing and population census in 2001 (absolute data)
- III.2–4. Population
- III.2–5. Population by basic age groups (as of Dec. 31)
- III.2–6. Population by sex (as of Dec. 31)
- III.2–7. Population by nationality
- III.2–8. Population by marital status (as of Dec. 31)
- III.2–9. Population by age (as of Dec. 31)
- III.2–10. Natural movement of population
- III.2–11. Marriages by age of engaged couples in 2001
- III.2–12. Marriages by education of engaged couples in 2001
- III.2–13. Divorces by education of couples in 2001
- III.2–14. Live-births by age of mother
- III.2–15. Marital live-births by birth order and non-marital live-births
- III.2–16. Live-births by month of birth
- III.2–17. Fertility of women by age
- III.2–18. Deaths by month of death
- III.2–19. Reported abortions by age of women
- III.2–20. Deaths by age and sex

III.2–21. Deceased men (women) by causes of death

III.2–22. Internal migration of population by types

III.2–23. International migration in 2001

III.3 Labour Market

- III.3–1. Economic activity of the population (from labour force survey)
- III.3–2. Employed by age and education (from labour force survey)
- III.3–3. Employed by Classification of Occupation – ISCO-88 (from labour force survey)
- III.3–4. Employed by economic activity – NACE (from labour force survey)
- III.3–5. Employed by sector, status in employment and permanency of the job (from labour force survey)
- III.3–6. Employees and tradesmen in the economy of the SR (average registered number)
- III.3–7. Average gross nominal monthly wages of employees in the economy of the SR calculated per persons
- III.3–8. Number of employees and average gross nominal monthly wage in the economy of the SR by size of enterprises
- III.3–9. Average gross hourly wage of employees in the economy of the SR for the enterprises with 20 and more employees (calculated per persons)
- III.3–10. Structure of average gross nominal monthly wage of employees in the economy of the SR for 2000 (from results of sample survey on structure of wages)
- III.3–11. Structure of monthly labour costs per employee in 2000 (from total labour costs survey)
- III.3–12. Hourly labour costs in the SR (from total labour costs survey)
- III.3–13. Unemployed registered in labour offices in the SR (as of Dec. 31)
- III.3–14. Unemployed by labour force survey

III.4 Fixed Assets

- III.4–1. Status and movement of fixed assets at purchasing value in 2000
- III.4–2. Status of tangible fixed assets at purchasing value as of Dec. 31, 2000 in corporations with 20 and more employees by groups
- III.4–3. Status of intangible fixed assets at purchasing value as of Dec. 31, 2000 in corporations with 20 and more employees by groups
- III.4–4. Fixed assets excluded from gross fixed capital formation as of Dec. 31, 2000 in corporations with 20 and more employees
- III.4–5. Status of fixed assets at purchasing value in 2000 in corporations with 20 and more employees by ownership
- III.4–6. Fixed assets at purchasing value as of Dec. 31, 2000 in corporations with 20 and more employees by size structure of enterprises
- III.4–7. Dwellings

III.5 Research and Development

- III.5–1. Research and development (R&D) personnel
- III.5–2. Research and development personnel in FTE by sectors and field of science
- III.5–3. Structure of activities of research and development institutions by current expenditures
- III.5–4. Expenditures on research and development
- III.5–5. Expenditures on research and development by socio-economic objectives
- III.5–6. Expenditures on research and development by sectors and fields of sciences
- III.5–7. Licences
- III.5–8. Applications concerning industrial legal protection
- III.5–9. Granted and registered kinds concerning industrial legal protection
- III.5–10. Applications concerning inventions according to the international patent classification
- III.5–11. Foreign applications concerning inventions and PCT according to the international patent classification
- III.5–12. Granted patents according to the international patent classification
- III.5–13. Applications concerning trademarks
- III.5–14. Registered trademarks
- III.5–15. Certified products and certified quality management systems

III.6 Organizational Structure of the Economy

- III.6–1. Legal entities by economic activities
- III.6–2. Enterprises by economic activities
- III.6–3. Natural persons-entrepreneurs by economic activities and selected legal forms as of Dec. 31, 2001
- III.6–4. Enterprises by economic activities and selected forms of ownership as of Dec. 31, 2001
- III.6–5. Enterprises by economic activities and staff categories as of Dec.31, 2001
- III.6–6. Enterprises by selected form of ownership and staff categories as of Dec. 31, 2001
- III.6–7. New founded enterprises by years
- III.6–8. Extinct enterprises by years
- III.6–9. New founded natural persons-entrepreneurs by years
- III.6–10 Extinct natural persons-entrepreneurs by years

IV.1 State and Protection of the Environment

IV.2 Air Quality

IV.3 Water

IV.1 State and Protection of the Environment

- IV.1–1. Protected territories
- IV.1–2. National parks and protected landscape areas as of Dec. 31, 2001
- IV.1–3. Penalties
- IV.1–4. Structure of stand area as of Dec. 31
- IV.1–5. Tree species area and their age structure as of Dec. 31, 2001
- IV.1–6. Damage to forests caused by immisions as of Dec. 31, 2001
- IV.1–7. Degree of damage to forests by tree species as of Dec. 31, 2001
- IV.1–8. Damage to forests caused by abiotic and biotic factors as of Dec. 31, 2001
- IV.1–9. Data on hunting grounds as of Dec. 31
- IV.1–10. Hunting and spring stock of game
- IV.1–11. Xenobiotics in foodstuffs
- IV.1–12. Municipal waste
- IV.1–13. Waste

IV.2 Air Quality

- IV.2–1. Emissions of major pollutants by economic activity – particulates
- IV.2–2. Emissions in burdened regions by selected pollution sources in 2000
- IV.2–3. Immissions in selected localities in 2001
- IV.2–4. Regional air pollution in 2001
- IV.2–5. Levels of surface ozone in selected monitoring stations
- IV.2–6. Regional pollution of precipitation in 2001

IV.3 Water

- IV.3–1. Water courses and waterworks under the administration of water management organizations as of Dec. 31
- IV.3–2. Public water-supply and sewage systems as of Dec. 31
- IV.3–3. Waste water drained off into water courses in 2000
- IV.3–4. Generation of waste water in 2000
- IV.3–5. Water quality in water courses by river-basins in 2001
- IV.3–6. Water quality in significant water courses in 2001 – quality categories
- IV.3–7. Water quality in the mouths of significant water courses in 2001

V.10 Tourism

V.1 Agriculture

- V.1–1. Area of land as of Dec. 31
- V.1–2. Gross agricultural production in enterprises with 20 and more employees
- V.1–3. Sown area as of May 20
- V.1–4. Production of agricultural crops
- V.1–5. Hectare yields
- V.1–6. Selected sorts of vegetables
- V.1–7. Selected sorts of fruit
- V.1–8. Area of vineyards and grape crops as of Dec. 31
- V.1–9. Age and sort composition of vineyards as of Dec. 31
- V.1–10. Roofed area
- V.1–11. Balance of cereals
- V.1–12. Livestock as of Dec. 31
- V.1–13. Livestock production
- V.1–14. Livestock yields
- V.1–15. Catches in inland waters
- V.1–16. Apiculture
- V.1–17. Sales of agricultural products by primary producers
- V.1–18. Level of agricultural production
- V.1–19. Means of mechanization as of Dec. 31
- V.1–20. Consumption of fertilizers

- V.1–21. Consumption of plant protection agents
- V.1–22. Employees and wages by main professions in agriculture
(in enterprises with 20 and more employees) in 2001
- V.1–23. Farm structure in 2001 (from results of the Farm Structure Census 2001)
- V.1–24. Employed of natural persons farms in 2001
(from results of the Farm Structure Census)
- V.1–25. Employees of legal persons farms in 2001
(from results of the Farm Structure Census)
- V.1– 26. Age structure of employed in farms in 2001
(from results of the Farm Structure Census)
- V.1– 27. Educational structure of employed in farms in 2001
(from results of the Farm Structure Census)
- V.1– 28. Area of utilized agricultural land in 2001
(from results of the Farm Structure Census)
- V.1– 29. Farms by size of utilized land in 2001
(from results of the Farm Structure Census)
- V.1– 30. Agricultural objects in ownership of farms in 2001
(from results of the Farm Structure Census)

V.2 Forestry

- V.2–1. Forest land
- V.2–2. Afforestation and silviculture
- V.2–3. Logging and timber deliveries
- V.2–4. Number and size of enterprises managing forest

V.3 Industry

- V.3–1. Basic indicators of industry
- V.3–2. Selected indicators on industry by size structure of enterprises
- V.3–3. Industrial production index of enterprises with 20 and more employees (not adjusted from influence of working days number) by economic activity
- V.3–4. Industrial production index (PY = 100) of enterprises with 20 and more employees (not adjusted from influence of working days number) by economic activity
- V.3–5. Industrial production index of enterprises with 20 and more employees (not adjusted from influence of working days number) by Main Industrial Groupings
- V.3–6. Industrial production index (PY = 100) of enterprises with 20 and more employees (not adjusted from influence of working days number) by Main Industrial Groupings
- V.3–7. Receipts from sales for export of enterprises with 20 and more employees by economic activity
- V.3–8. Receipts from industrial activity of enterprises with 20 and more employees by economic activity
- V.3–9. Number of enterprises with 20 and more employees by economic activity
- V.3–10. Monthly labour productivity based on receipts from industrial activity of enterprises with 20 and more employees by economic activity
- V.3–11. Average registered number of employees of enterprises with 20 and more employees by economic activity

- V.3–12 Average monthly wage of employee in enterprises with 20 and more employees by economic activity
- V.3–13. Receipts from industrial activity of enterprises with 20 and more employees by Main Industrial Groupings
- V.3–14. Selected indicators on industry by sector of ownership
- V.3–15. Production of selected industrial commodities

V.4 Energy

- V.4–1. Primary energy sources and final consumption of fuels, electricity and heat
- V.4–2. Primary energy sources and final consumption of solid fuels
- V.4–3. Primary energy sources and final consumption of liquid fuels
- V.4–4. Primary energy sources and final consumption of gaseous fuels
- V.4–5. Primary energy sources and final consumption of electricity
- V.4–6. Sources and use of fuels, electricity and heat
- V.4–7. Sources and use of electricity
- V.4–8. Consumption of selected fuels in agriculture in enterprises with 20 and more employees
- V.4–9. Consumption of selected fuels and electricity in industry in enterprises with 20 and more employees
- V.4–13. Consumption of selected fuels and electricity in construction in enterprises with 20 and more employees

V.5 Construction

- V.5–1. Construction enterprises classified by number of employees
- V.5–2. Construction production – aggregate data
- V.5–3. Construction production carried out by own employees and average registered number of employees by ownership sector
- V.5–4. Construction production carried out by own employees by months
- V.5–5. Construction production carried out by own employees and labour productivity by size structure of enterprises
- V.5–6. Average registered number of employees and average monthly wage by size structure of enterprises
- V.5–7. Basic indicators in construction enterprises with 20 and more employees
- V.5–8. Contractually agreed construction production in new construction, reconstruction and modernization by Classification of Types of Construction in enterprises with 20 and more employees
- V.5–9. Construction production carried out by own employees by Classification of Production (CPA) in enterprises with 20 and more employees
- V.5–10. Completed dwellings in new buildings for habitation built by supplier enterprises with 20 and more employees by construction technology
- V.5–11. Consumption of selected products in construction enterprises with 20 and more employees

V.6 Transport, Post and Telecommunications

- V.6–1. Selected indicators on transport, post and telecommunications
- V.6–2. Basic data on transport network as of Dec.31
- V.6–3. Motor vehicles as of Dec.31
- V.6–4. Average registered number of employees for incorporated enterprises with 20 and more employees
- V.6–5. Railway transport
- V.6–6. Railway transport of goods by commodity groups
- V.6–7. Road public and non-public transport
- V.6–8. Selected indicators in road public transport by size structure of enterprises
- V.6–9. Road public transport of goods by commodity groups
- V.6–10. Water transport
- V.6–11. Shipping by commodity groups for enterprises with 20 and more employees
- V.6–12. City transport
- V.6–13. Air transport
- V.6–14. Pipeline transport
- V.6–15. Post office
- V.6–16. Telecommunications as of Dec. 31

V.7 Internal Trade

- V.7–1. Structure of receipts for retail activity
- V.7–2. Receipts in retail activity by ownership
- V.7–3. Receipts in retail trade by economic activities
- V.7–4. Selected indicators in internal trade by size structure of enterprises
- V.7–5. Receipts in wholesale by economic activities
- V.7–6. Network of outlet centres of catering with 20 and more employees as of December 31, 2001
- V.7–7. Retail network in organizations with 20 and more employees as of December 31, 2001

V.8 Foreign Trade

- V.8–1. Territorial structure of foreign trade
- V.8–2. Foreign trade by commodity groups (Standard International Trade Classification Revision 3)
- V.8–3. Imports, exports and trade balance by selected countries
- V.8–4. Foreign trade by chapters of classification of goods in Customs Tariff
- V.8–5. Import of selected commodities by the most important partners
- V.8–6. Export of selected commodities by the most important partners

V. 9 Real Estate, Renting and other Community Activities

- V.9–1. Basic indicators for real estate, renting and other community activities
- V.9–2. Selected indicators for real estate, renting and other community activities by size structure of enterprises
- V.9–3. Receipts for real estate, renting and other community activities

V.10 Tourism

- V.10–1. Capacity and performances of accommodation facilities
- V.10–2. Capacity and performances of accommodation facilities in selected towns in 2001
- V.10–3. Foreign visitors in accommodation facilities of tourism
- V.10–4. Active tourism organized by travel agencies in the SR
- V.10–5. Passive tourism organized by travel agencies in the SR
- V.10–6. Foreign tourism by sections of borders
- V.10–7. Number of entries of foreign visitors by the visa requirement

VI.1 Income, Expenditure and Consumption of Households

VI.2 Education

VI.3 Health

VI.4 Social Security

VI.5 Culture and Religion

VI.6 Physical Culture

VI.1 Income, Expenditure and Consumption of Households

- VI.1–1. Structure of gross money income and expenditure of households by social groups – household budget surveys
- VI.1–2. Structure of net money income and expenditure of households by social groups – household budget surveys
- VI.1–3. Consumption of selected kinds of food and alcoholic beverages (per capita/year)
- VI.1–4. Daily consumption of energy and the most important nutritive substances per capita
- VI.1–5. Equipment of households with durables from the housing and population census

VI.2 Education

- VI.2–1. Kindergartens and basic schools
- VI.2–2. Grammar schools (secondary general education)
- VI.2–3. Specialized secondary schools
- VI.2–4. Specialized secondary schools by type of schools (separate part-time schools included)
- VI.2–5. Specialized secondary schools – students and school-leavers by fields of study (full-time study)
- VI.2–6. Vocational secondary schools
- VI.2–7. Special schools
- VI.2–8. Higher education institutions
- VI.2–9. Higher education institutions by fields of study – students of Slovak nationality
- VI.2–10. Higher education institutions by subjects of studies
- VI.2–11. Higher education institutions – foreign students by nationality
- VI.2–12. Higher education institutions in school year 2001/2002
- VI.2–13. Schools by type and teaching language
- VI.2–14. Basic schools of arts
- VI.2–15. Providing meals at schools
- VI.2–16. Scholarships
- VI.2–17. After school facilities
- VI.2–18. Church schools

VI.2–19. Private schools

VI.2–20. Revenues and expenditures in church schools

VI.2–21. Revenues and expenditures in private schools

VI.2–22. Income in private and church schools

VI.2–23. Expenditures in private and church schools

VI.2–24. Expenditures on education from the state budget and municipal budgets

VI.3 Health

- VI.3–1. Physicians posts, beds in health facilities, physicians
- VI.3–2. Facilities of pharmaceutical services
- VI.3–3. Consumption of drugs by categories as of Dec. 31
- VI.3–4. Consumption of drugs by producer countries as of Dec. 31
- VI.3–5. Consumption of drugs by selected producers as of Dec. 31
- VI.3–6. Expenditures in public health sphere
- VI.3–7. Natural curative spa
- VI.3–8. Selected infectious diseases compulsory notified
- VI.3–9. Bed fund in hospitals (including maternity hospitals) by wards
- VI.3–10. Cases of treatments (examination) in outpatient facilities of curative and preventive care (without visiting service)
- VI.3–11. Terminated cases of disability to work
- VI.3–12. Disability to work due to disease and injury
- VI.3–13. Income in state subsidized health facilities
- VI.3–14. Expenditures in state subsidized health facilities

VI.4 Social Security

- VI.4-1. Persons under sickness insurance
- VI.4-2. Systematic sickness insurance benefits
- VI.4-3. Systematic sickness insurance benefits by kind
- VI.4-4. State social benefits and sickness insurance and pensions security benefits refunded by government by kind
- VI.4-5. Pension security benefits
- VI.4-6. Number of pensions paid out, average pensions and pension security benefits paid out
- VI.4-7. Average monthly level of pensions paid
- VI.4-8. Number of pension receivers
- VI.4-9. Non-investment expenditures on social assistance
- VI.4-10. Nursing service
- VI.4-11. Social service facilities as of Dec. 31 by kinds
- VI.4-12. Social service facilities as of Dec. 31
- VI.4-13. Refugees in the Slovak Republic

VI.5 Culture and Religion

- VI.5–1. Theatres
- VI.5–2. Musical ensembles
- VI.5–3. Audio-visual works
- VI.5–4. Radio broadcasting
- VI.5–5. Television broadcasting
- VI.5–6. Public libraries, scientific libraries, university libraries
- VI.5–7. Periodical press
- VI.5–8. Journals by periodicity of issue
- VI.5–9. Newspapers by periodicity of issue
- VI.5–10. Activities of individual cultural facilities (museums, galleries, observatories, Zoo's)
- VI.5–11. Population by religions by the housing and population census
- VI.5–12. Selected indicators on churches
- VI.5–13. Selected indicators on Roman-Catholic Church
- VI.5–14. Membership in civil associations

VI.6 Physical Culture

- VI.6–1. Selected indicators on physical culture
- VI.6–2. Sports schools
- VI.6–3. Sports classes
- VI.6–4. Unions and membership of the Association of Technical and Sporting Activities of the SR and the Slovak National Motor-car Club
- VI.6–5. Metals won by the Slovak sportsmen (adults)
- VI.6–6. Metals won by the Slovak sportsmen (juniors)

VII.1 Crime-rate and Justice

VII.2 Accidents and Fires

VII.1 Crime-rate and Justice

- VII.1–1. Crime-rate
- VII.1–2. Development of criminal offences by basic groups and kinds
- VII.1–3. Cases settled by courts
- VII.1–4. Results of criminal proceedings and legally passed sentences
- VII.1–5. Persons convicted of selected crimes
- VII.1–6. Juveniles convicted of selected crimes
- VII.1–7. Civil cases
- VII.1–8. Sued and convicted persons in penitentiary institutions
- VII.1–9. Convicts in penitentiary institutions by reformatory and reclamation groups (as of Dec. 31)
- VII.1–10. Convicts by reformatory and reclamation groups, education and sex (as of Dec. 31)
- VII.1–11. Convicts by duration of custodial sentence and reformatory and reclamation groups (as of Dec. 31)
- VII.1–12. Convicts by age and sex

VII.2 Accidents and Fires

VII.2 –1. Road accidents

VII.2–2. Road accidents by cause

VII.2–3. Road accidents by main causes

VII.2–4. Road accidents by place of origin

VII.2–5. Fires

VII.2–6. Fires by branches of the economy

VII.2–7. Killed and injured persons in fires by observed categories

VIII.1 Regions

- VIII.1–1. Gross domestic product
- VIII.1–2. Gross value added by branches in 2000
- VIII.1–3. Gross domestic product in purchasing power standard
- VIII.1–4. Surface area, population and population density in 2001
- VIII.1–5. Population as of Dec. 31
- VIII.1–6. Natural movement of population
- VIII.1–7. Natural increase, decrease (–) of population
- VIII.1–8. Migration of the population
- VIII.1–9. Marriages and divorces
- VIII.1–10. Employment by selected branches as of Dec. 31, 2001
- VIII.1–11. Registered unemployment and unemployment rate as of Dec. 31, 2001
- VIII.1–12. Structure of monthly labour costs per employee in 2000 (from total labour costs survey)
- VIII.1–13. Emissions of basic pollutants
- VIII.1–14. Specific emissions of basic pollutants
- VIII.1–15. Public water-supply and sewage systems
- VIII.1–16. Area of land as of Dec. 31
- VIII.1–17. Production of agricultural crops
- VIII.1–18. Hectare yields of agricultural crops
- VIII.1–19. Livestock as of Dec. 31

- VIII.1–20. Receipts from sale of farming products of primary production
- VIII.1–21. Gross agricultural production from gross turnover
- VIII.1–22. Receipts from own performances and goods and number of employees in industry
- VIII.1–23. Construction production and number of employees in construction branch
- VIII.1–24. Road transport
- VIII.1–25. Receipts in retail trade
- VIII.1–26. Receipts in wholesale
- VIII.1–27. Construction of dwellings in 2001
- VIII.1–28. Completed dwellings by number of rooms in 2001
- VIII.1–29. Kindergartens and basic schools
- VIII.1–30. Grammar schools and specialized secondary schools
- VIII.1–31. Beds and physicians posts in health facilities
- VIII.1–32. Beds and physicians posts in hospitals
- VIII.1–33. Beds and physicians posts in natural curative spa
- VIII.1–34. Entrepreneurial entities – natural persons as of Dec. 31, 2001
- VIII.1–35. Enterprises by selected legal forms as of Dec. 31, 2001
- VIII.1–36. Criminality by major groups in 2001
- VIII.1–37. Violent criminal offences in 2001
- VIII.1–38. Road accidents in 2001
- VIII.1–39. Fires in 2001

VIII.2 Towns

VIII.2–1. Natural movement of population

VIII.2–2. Population, total increase, decrease (–) of population

VIII.2–3. Geographical data

VIII.2–4. House and dwelling stock

VIII.2–5. Retail and accommodation facilities network as of Dec. 31, 2001

VIII.2–6. Water-supply and gas-supply network and sewage system as of Dec. 31, 2001

VIII.2–7. Education in 2001

VIII.2–8. Culture as of Dec. 31, 2001

II.1 National Accounts

Methodological notes

In the chapter “Slovakia from 1960 – 2001” is published historic time data series of selected aggregates of national accounts since 1993 in current and constant prices (1995 = 100). The years 1992 – 1995 were compiled according to the ESA 79 methodology (European System of Integrated Economic Accounts rev. 1979). National Accounts for 1993 – 1995, within compilation of national accounts for year 1996, were revised at the level of the main aggregates in line with ESA 95 methodology (European System of National and Regional Account in the Community 1995). Semi-definitive data for years 1993 – 1999 are revised from point of the implementation ESA 95 on the basis of annual account 1999. Data for 2000 and 2001 are preliminary, data for 2001 are based on the Quarterly National Accounts.

The Quarterly National Accounts are compiled on the basis of the ESA 95 methodology and are after the revision which has been made based on the results of the National Accounts for 1999. Selected indicators of Quarterly National Accounts are expressed in current and constant prices. GDP as balance aggregate item is recalculated into constant prices on the side of formation as the sum of value added of branches (reached by twice deflation as difference of production and intermediate consumption at constant prices) minus FISIM at constant prices plus taxes reduced by subsidies on products at constant prices. On the uses side GDP at constant prices is balance item between final use (domestic and foreign demand) and imports, which are recalculated into constant prices. Than GDP price deflator expresses share between calculated GDP at current and constant prices.

Rate of exchange USD and EUR used for GDP recalculation is average annual exchange rate given by the National Bank of Slovakia.

Since 1996, the **Annual National Accounts** have been compiled in accordance with the new methodology ESA 95 and are compatible with the national accounts of the Member and Associated Countries of the European Union.

Generally speaking, the National Accounts of the SR are to be considered as compatible with the ESA 95 methodology. Compatibility is provided if next basic methodological principles are implemented:

- extension of the estimates of generation of assets
- calculation of the consumption of fixed capital in the sector of general government from the replacement value of fixed assets
- recalculation into constant prices by the means of chained indices
- calculation of the financial intermediation services indirectly measured (FISIM) by the sector allocation method
- application of the item social insurance regardless the way of funding.

Since 1996 next principles in the Annual National Accounts were applied in the framework of the 1. phase of the ESA 95 system implementation.

- the extension of estimates of the generation of assets for software, additional calculation for garages, garden huts, weekend houses and an additional calculation for a consumption and fixed capital formation in the commodity personal cars in the household sector,
- the calculation of financial intermediation services indirectly measured (FISIM) by the method of allocation to sectors,
- inclusion of imputed rent, i. e. production of services of the owners of dwellings which they render to themselves calculated by the cost method and by including depreciation from the replacement value of dwellings,
- calculation of the replacement value of dwellings, garages, weekend houses, garden huts and personal cars based on quantities and market prices,
- calculation of consumption of fixed capital for housing stock from the replacement value of dwellings in all sectors which own dwellings and for garages, weekend houses and garden huts,
- adjustment of an excessive increase of VAT paid and custom duties due to the change in financial rules,
- imputation of a part of illegal non-recorded economy for prostitution and sale of drugs.

Within the compilation of the Annual National Accounts for 1999 (2. phase) the implementation was extended by:

- calculation of fixed capital consumption in the sector of government and non-profit institutions from the replacement value of tangible and intangible fixed assets based on natural and financial data,
- inclusion of production of units granting insurance services broken down into life, non-life and supplementary pension insurance,

- inclusion of opportunity cost in imputed rent,
- quantification of wood increase in forests,
- increase of production for own final use and final consumption of households by forest fruit picking.

Implementation within compilation of the Annual National Accounts for 2000 was extended by calculation of fixed capital consumption in all branches of the economy from replacement value of tangible and intangible fixed assets.

National Accounts represent a compatible accounting framework for the systematic and detailed description of the total economy as well as particular sectors and sub-sectors where all stages of the economic process are recorded (output, generation and distribution of income, use of income, accumulation). In line with the methodology, each account has the resource side and the use side and the balancing item of each account has its own economic contents. Transactions represent economic operations and the related flows carried out between economic units. According to their nature, they can be broken down into four main groups:

- transactions in goods and services (code P) which are related to production (national output or imports), exchange and use of goods and services (intermediate consumption, final consumption, capital formation or exports),
- distributive transactions (code D) by means of which the value added generated by residents is being distributed and the income or wealth is redistributed,
- financial transactions (code F) (transactions in financial means) are related to changes in financial assets and liabilities in particular sectors,
- other flows in accumulation accounts (code K), for instance, consumption of fixed capital (K.1), acquisition less disposal of non-financial non-produced assets (K.2).

The code B is assigned to balancing items, which express the difference between the resources and use in the current accounts and the difference between assets and liabilities in the capital and financial accounts.

Balance items in the tables are given in gross term, i. e. including fixed capital consumption or in net term, i. e. without fixed capital consumption. The code for balance item in gross term is created by the code of item and by the letter “g”. Also the letter “n” is linked to the code relating the net balance item. Item code with sign “*” creates balance item for economy in total.

The balancing item of Production Account is **gross domestic product at market prices**

(B.1*g) for economy in total which is the final result of activities of resident producers. In the sector classification the balance item is **gross value added B.1 g**. After subtracting of fixed capital consumption both items are created in net term.

Net operating surplus (B.2n) is balancing item of the Generation of Income Account, which include distributive transaction linked to production. Net operating surplus corresponds to the net domestic product at market prices less the rewards of employees and net taxes on production and imports. In the sector of households it also represents the **net mixed income (B.3n)**. It includes profit and compensation for work of entrepreneurs not registered in the Business Register. Distinction of the two items can be done by gross estimate and therefore it is not applied.

The balancing item of the Allocation of Primary Income Account is **net national income (B.5*n)**. According to the sector classification the balancing item is **net balance of primary income (B.5n)**. The balancing item of Secondary Distribution of Income Account is **net disposable income (B.6n)** which expresses the income of the country (or the given sector) usable for the final consumption and saving.

The Redistribution of Income in Kind records flows related to the use of particular goods and services which these households obtain free of charge. The balancing item is **net adjusted disposable income (B.7n)**.

Net saving (B.8n) are the balancing item of the Use of Income Account.

The balancing item of the Capital Account, which records the acquisition less disposal of non-financial assets of resident units and measures the changes in the net worth due to saving (the last balance item of current accounts) and capital transfers, are **net lending (+) or net borrowing (-) (B.9)** for total economy which are the sum of net lending and net borrowing of institutional sectors. They represent net resources which the total economy lends abroad (if they are plus) or borrows from abroad (if minus). The net lending (+) or borrowing (-) for total economy are equal, however with the opposite sign, to the net borrowing (-) or lending (+) from abroad. Net lending (+) or borrowing (-) should correspond to B.9 item's value in the Financial Account. The differences between items are caused by using of different data sources in non-financial and financial accounts and timing difference.

Changes in the net worth due to saving and capital transfers (B.10.1) are not balancing item in the system structure. But it is important part of changes of net worth, therefore it is coded together with others balancing items.

External Account of Goods and Services records imports of goods and services on resources side of the account and exports of goods and services on the uses side. The difference between resources and uses is balancing item called **external balance of goods and services (B.11)**.

External Account of Primary Incomes and Current Transfers is determined by **current external balance (B.12)**, which in the structure of the system corresponds to saving by the institutional sectors.

The Supply and Use Tables provide a background for a detailed analysis of the process of generation of resources of goods and services, their use and generation of income linked to the production process. Methodological basis for the compilation of commodity by industry tables is the ESA 95 methodology. In tables, there are indicators aggregated into categories broken down by commodities and main activity. The gross output and value added are expressed at basic prices while the intermediate consumption at purchaser's prices. Data on gross output are based on the Supply table and intermediate consumption indicator results from the 1. quadrant of the Use table. Other indicators (final consumption, formation of gross fixed capital are given at purchaser's prices) are the part of the 2. quadrant of the Use table. Time series of indicators for years 1993 – 2000 is compiled at current and constant prices (1995 = 100). Data for years 1993 – 199 are semi-definitive and for 2000 preliminary.

The allocation and use of income in the sector of households are calculated in current prices by ESA 95 methodology. The table contains basic items of the accounts of the sector of households, which includes individual citizens as final consumers (a consumer household) and natural persons – entrepreneurs which carry out their business activities according to the Tradesmen Law or other legislative rules and are not registered in the Business Register.

Definitions

Production represents the value of goods and services, which are the result of the activity of resident units during the accounting period in the territory of the Slovak Republic. Production according to the ESA 95 is broken down into market production, own account production and other non-market production.

Intermediate consumption consists from services and goods of a short-term use which have been consumed or transformed by the production process within the accounting period.

Value added is a balancing item and is calculated by a subtraction of intermediate consumption from production of individual sectors or branches.

Domestic product at market prices expresses the final result of the production activity of resident producers for economy in total. It corresponds to the total production (at basic prices, i. e. it includes other net taxes on production) of resident producers after subtracting their intermediate consumption and adding the net taxes on products.

Within the **final consumption**, two types of consumption are distinguished: **expenditures on final consumption**, which include expenditures on the consumption of goods and services and may occur in the sector of government, households and non-profit institutions serving households and **actual final consumption** related to the acquisition of consumer goods and services, which can be of a nature of the collective or individual consumption.

Gross fixed capital formation for total economy consists from expenditures on new fixed assets or from other specific expenditures, which the producers spend on goods and services in order to retain, increase or expand their production capacity or to create new production possibilities in the future. In the framework of sector classification except costs on purchase of new fixed assets (without lands, valuables, and valuable rights) there are included costs on purchase of used fixed assets. Formation value is reduced by sale of fixed assets, transfer by barter exchange or natural capital transfer.

Change in inventories is defined as a difference between the acquisition and disposal of inventories of the particular time period. Inventories include the stored material, work in progress, semi-finished goods of the own-production, goods, animals and stored goods.

Valuables are non-financial assets bought or held by people for purpose of saving value.

Consumption of fixed capital represents the amount of fixed assets consumed for surveyed period in consequence of normal depreciation and foreseeable obsolescence.

Exports and imports of goods and services include exports and imports of goods surveyed in the framework of the trade balance and exports and imports of services surveyed in the framework of the balance of services. Exports and imports of services include all services related to the foreign activity (services of freight, passenger and other transport, insurance and other services).

Compensation of employees covers total compensation in a monetary form (or in kind) which is paid by an employer to the employee as a compensation for work being done by the employee during the given accounting period. Compensation of employees is broken down

into wages and salaries and social contributions of employers. Social contributions of employers are further broken down into actual social contributions of employers and imputed social contributions of employers.

Taxes on production and imports are compulsory unrequited payments, in cash or in kind, which are levied by general government. They are divided into taxes on products and other taxes on production.

Subsidies are current unrequited payments, which general government make to resident producers. They include subsidies on products and other subsidies on production.

Property income results from the ownership of financial assets, i. e. deposits, bonds or tangible non-produced assets (land and sub-soil assets) which the owner obtains as a compensation for providing them to or making them available for another institutional unit. Property income includes interest, distributed income of corporations (dividends, withdrawals from the income of quasi-corporations), reinvested profit from foreign direct investment, property income attributed to insurance policy holders and rent.

Current taxes on income and wealth, etc. are of the same nature as tax on income (of households, from the profit of corporations, of non-profit institutions), as well as the tax on wealth which are being paid regularly each tax period (on the contrary to the taxes on capital which are being levied irregularly). The transfers are in question because the government does not provide any counter-value to the individual unit paying taxes. Current taxes on income and wealth do not include inheritance taxes, death duties or taxes on gifts, occasional or exceptional levies on capital or wealth, taxes on land, buildings or other assets (owned or rented) which are used for production.

Social contributions and benefits are broken down into social contributions (actual and imputed), social benefits other than social transfers and social transfers in kind which the government units and non-profit institutions serving households provide to individual households.

Other current transfers cover non-life insurance premiums and claims, transfers within general government, current international co-operation and miscellaneous current transfers which represent transfers to non-profit institutions, transfers between households, fines and penalties, lottery, winnings and bets, etc.

Adjustment for the change in net equity of households in pension funds reserves is a item harmonizing households savings and a change in net equity of households in pension funds reserves in the financial account.

Financial transactions are transactions in financial assets and liabilities between institutional units and between them and the rest of the world by mutual agreement involving simultaneous creation or liquidation of a financial asset and the counterpart liability or a change of ownership of a financial asset or assumption of a liability.

Monetary gold and special drawing rights. Monetary gold includes gold held by monetary authorities or other institutions under supervision of monetary authorities as foreign exchange reserve. Special drawing rights include all transactions with international reserve assets created by the International Monetary Fund.

Currency and deposits. There are included currency (notes and coins in circulation), transferable deposits, which are immediately convertible into currency or which are transferable by cheques, banker's order, debit entry or the like both without any kind of significant restriction or penalty. There are included other deposits not negotiable, in national or in foreign currency (e. g. time deposits, savings certificates, savings books, etc.).

Securities other than shares. They cover debt securities as bills, bonds, certificates of deposit, commercial paper, debentures, financial derivatives and similar instruments normally traded in the financial market.

Loans are unconditional debts to the creditor which have to be repaid at maturity and which are interest-bearing. There are included bank credits, financial assets or liabilities of all sectors and the rest of the world.

Shares and other equity. These financial assets generally entitle the holder to a share in the profits of the corporation or quasi-corporation and to share in their net assets in the event of liquidation. There are divided on shares and other equity excluding mutual funds shares, which represent property rights on corporations or quasi-corporations and generally entitle the holders to a share in the profits and to share in their net assets in the event of liquidation. Mutual funds shares include shares issued by funds regardless they are open-end, semi-open, closed-end funds. They may be quoted or unquoted.

Insurance technical reserves cover net equity of households in life insurance and pension funds reserves, prepayments of insurance premium, reserves for outstanding claims. In the Financial Account the prepayments of insurance premium recorded between policy holders and insurance corporations consist of those parts of the premiums that are payable in the current accounting period and that are intended to cover risks outstanding within the following period.

Other accounts receivable include trade credits and advances, which create financial claims relating to the delivery of goods and services, where payment has not taken place. Other accounts receivable/payable arise from timing difference between distributive transactions or financial transactions on the secondary market and the corresponding payment.

Source

The compilation of the National Accounts is based on the following data sources:

- annual and quarterly state statistical surveys,
- banking information, e.g. monetary overview, balance of payments, banking statistics data,
- accounting statements and administrative data sources of the Ministry of Finance of the SR and other next ministries and central bodies,
- expert estimates of data based on the methodological recommendations of experts from Eurostat.

Detailed information is presented in the publications of the Statistical Office of the SR, in the quarterly publication Macro-economic Indicators of the Quarterly National Accounts and Value Added and in annual publications National Accounts of the SR; Supply and Use Tables by Commodities and Industries in the SR.

II.2 Finance

Methodological notes

General government budgets consist of central government budget which is managed by government of the Slovak Republic, local budgets managed by local authorities, budgets of social security funds and budgets of state special funds including budgets of the Slovak Land Fund and the National Property Fund. Revenues and expenditures of central government are presented including foreign loans repayments. Revenues and expenditures of local budgets are without received credits, transfers from monetary funds and repayments of principals. Data on revenues and expenditures of general government budgets in total are consolidated, whereas data shown for individual items of general government budgets are not.

Revenues of local budgets in classification on own revenues and special grants are without received credits and expenditures in classification on current and capital expenditures are without principals repayments.

Revenues of state funds are presented without received credits and residues from the last year and expenditures are given without repayments of principals of received credits.

Revenues of state budget are without revenues from foreign credit repayments and received credits. Expenditures are without principals repayments of received credits. In the table on structure of revenues and expenditures of the state budget by type is presented classification of current expenditures on public consumption of the population and the government by budgetary chapters. There is only finance granted by the Ministry of Finance of the SR by way of state budget chapters of the Ministry of Education of the SR, the Ministry of Labour, Social Affairs, and Family of the SR and the Ministry of Health of the SR.

In the Slovak Republic the area of **compulsory social security** is performed by the following institutions: Social Insurance Agency, health insurance companies and National Labour Office.

Data on revenues, expenditures, insured persons or payers to the health insurance companies, to the Social Insurance Agency and to the National Labour Office are obtained from annual statistical surveys. Reporting units are presented by the headquarters of organizations of compulsory social security.

Non-financial corporations are incorporated entrepreneurial subjects running business to make profit in all branches of activity except banking and insurance. Subsidized organizations covering their expenditures by more than 50 % of revenues are also included. Those enterprises which are not corporations (households, tradesmen, freelancers and farmers) are excluded.

Banking includes selected indicators on activity of the National Bank of Slovakia, commercial banks, investment companies and funds; data on insurance sector include figures on commercial insurance companies.

Direct foreign investments in the Slovak Republic and investments of the Slovak Republic abroad express equity capital and reinvested profit.

All figures are given at prices and in methodology and organization structure of the current year. Data are compiled in national methodology. COFOG classification is not applied.

Definitions

State budget expresses centralized financial fund of central government by which the state finances are created, divided and used.

Local budgets are compiled by local authorities or by them established subsidized organizations. Budgets contain expected revenues and approved expenditures of given bodies needed for fulfilment of their functions and works.

Budgets of state special funds are determined for financing of special tasks. Sources of state fund and the way of their use are defined by the law according to which the state special fund is established.

General government debt expresses accumulated financial liabilities of the general government sector that are the consequence of bank credits and other loans receiving.

Incomes from premium collection (for health and social insurance, pension security and insurance in unemployment) include payments according to the valid laws.

Other payments include incomes of the Social Insurance Agency from arrears of payments, fines, regression compensations and penalties.

Other compensations for health care include first aid, air transport, extra compensations over the Treatment Order standard, treatment abroad, etc.

Systematic sickness insurance benefits include sickness benefits, family member

attendance allowance, equalising pregnancy and maternity allowance and maternity financial allowance.

Systematic pension security benefits comprise old-age, invalidity, long-term service, widow's, widower's and orphan's pensions, other pensions declared before January 1, 1957, contributions to pensions of members of closed farming co-operatives.

Social insurance benefits paid by state include increase of pension in case of sole source income, increase of pension in case of fight against fascism and rehabilitation, increase of pension in case of disability, social pensions, wife's pension, children's allowances and extra contributions to the children's allowances, parental allowance, compensations for earnings during serving in armed forces and in civilian service, reimbursement of health resonance.

The insured in health insurance companies refer to the summarized data from registers of insured persons in the individual health insurance companies.

Costs present the sum of costs on operation, financial transactions and extraordinary costs.

Profit/loss expresses the result of economic activity of reporting unit for the time period. It is calculated as a subtraction of revenues from expenditures and has character of profit or loss. For statistical purpose it is given before taxation.

Liabilities express payment obligation of a debtor to domestic or foreign creditors. They express foreign investments for financing of current operation. Bank credits and short term financial subsidy are excluded.

Receipts from own performances and goods, this indicator was introduced by the Statistical Office of the SR in the framework of harmonisation with requirements of the European standards and with purpose of unified survey of receipts in all branch statistics. There are included receipts for own products, receipts from sale of services and receipts for goods. This indicator in gross term is not reduced by costs on goods purchased for purpose of next sale.

Balance of payment contains the sum of all transactions (material as well financial) coming to the country and all transactions leaving the country abroad for the time period.

Money M1 – a money aggregate (mass of money) in the narrower sense of the word consists of the currency in circulation (after deduction of cash kept in bank teller's departments) and demand deposits (without the off-budget means of the governmental sector and the National Property Fund). Quantity of money in broader sense of the word – M2 (liquid liabilities) includes, in addition to all M1 components, also the so called "quasi money" QM

i. e., time deposits (without the off-budget means of the governmental sector and the National Property Fund) and foreign currency deposits (only deposits of residents converted by the actual exchange rate).

Bribor presents the reference interest rate of interbank deposits in inland monetary market.

Capital market is a form of credits providing, which repayability is longer than one year. The number of series of the securities issued is given by the Law No 600/1992 Code on Securities as amended and supplemented. Subscribed securities express the value of actually sold securities in a particular year.

Direct foreign investments in the Slovak Republic and investments of the Slovak Republic abroad is the increase in the invested capital flowing from abroad or abroad in the form of a financial or material investment. Foreign investment state as of December 31, 2001 is updated by state as of May 30, 2002. Data cover the capital part of the entrepreneurial subjects where the value of foreign assets and liabilities was more than 500 thousand SKK at the end of period and the value of invested capital was higher than 500 thousand SKK while the investment was direct or mediated through an investor. Data also include subjects with invested capital lower than 500 thousand SKK if other receivables and payables against abroad were higher than 500 thousand SKK and subjects fulfilled the reporting obligation.

Supplementary pension insurance of employees enables to obtain a supplementary old-age, invalidity, survivor's pension by insured or by his/her survivors in case of death. Activity of supplementary pension insurance companies is determined by the Law of the National Council of the Slovak Republic No. 123/1996 Code of Acts in the last wording.

Source

Source of published data on general government budgets is the Ministry of Finance of the SR.

Data source in financial sector is the Na-tional Bank of Slovakia, the Slovak Association of Insurance Companies and state statistical survey realized by the Statistical Office of the SR in this branch regardless of the number of employees.

All published data for the branch of compulsory social security and the branch of non-financial organizations are obtained from the statistical survey of the SO SR.

Data for branch of supplementary pension insurance have been obtained from administrative sources through the Ministry of Labour, Social Affairs and Family of the SR.

More information can be obtained in quarterly and annual publication Selected Indicators on the Health Insurance Companies, the Social Insurance Agency and the National Labour Office, in quarterly publication Summary Economic Results of non-financial and financial corporations in the SR.

II.3 Prices

Methodological notes

Since 1997 the price indices have been published in structures derived from base 1995 while the last years were recalculated by coefficients (conversion bridges) onto conditions of valid schemes.

Price indices in production branch express the rate of production price changes of inland producers realized on domestic market.

In 2001 the scheme of **industrial producers price index** contains app. 2 900 representatives (products) of inland serial industrial production classified into sections 10 to 41 of the Classification of Products by Activity (CPA). Constant weights derived from the structure of industrial receipts for year 1995 are used for the aggregation of individual products indices into higher classification levels. Since 1997 the total index of industrial producers prices has also covered the observation of drinking water prices. Price index of sewage water and its purification is surveyed individually. The base period is December 1995.

Products prices are surveyed for selected industrial producers on “primary market” i. e. during first market transaction between producer and customer. Prices do not comprise value added tax but include excise tax for products specified by law (hydrocarbon fuels and lubricants, beer, wine, spirit, tobacco and tobacco products).

Price index of raw wood covers 20 selected products (representatives) of leafy and coniferous raw wood assortments (CPA 02). The index is calculated by using of constant weights derived from the sale structure in 1995. This index is published with 1995 average = 100 as a base. Prices of selected assortments of coniferous and leafy wood (excluding value added tax) are surveyed for selected more important producers. Besides changes in nominal prices the index also reflects the changes in the share of realized wood species.

The price index of agricultural products contains information on price level development for 115 main agricultural products (crop, livestock, fruit, vegetables) classified in CPA 01. Indices are calculated from surveyed prices of production assigned for further processing or sale. Calculation of aggregates is based on constant weighting system derived from the average structure of agricultural production sales from 1993 to 1995. Prices of individual

months of 1995 are the basis for price index calculation. The prices of agricultural products are surveyed in selected producers during the sale to a customer (i. e. primary market) without value added tax.

Data on average prices of selected agricultural products are the average for selected qualities (without a non-standard) for crops and animals products and in fruit and vegetables for 1st quality.

The scheme of **price indices of construction works** is compiled from app. 580 representatives – selected items of construction works (CPA 45). Weights system reflects the structure of construction production in 1995. The base period is average of 1995. Selected construction suppliers grant the prices for representatives without value added tax. Price of construction work per one measuring unit includes all costs needed to build a construction, i. e. materials, semi-finished goods, costs of the operation of construction machines, costs of transport, indirect costs (except equipment in the construction site) and profit. Total price index of construction work consists of the price index of new construction and of the price index of repair and maintenance.

The price indices of supplies of goods and services into agriculture and the price indices of materials and components used in construction express the rate of price changes on input side.

The price index of supplies of goods and services into agriculture includes products and services purchased by agricultural producers and consumed by agricultural production. It is calculated from surveyed prices of 110 kinds of important purchased products and services (selection of respondents is identical with the selection for the price index of agricultural products) and from price indices of selected groups, or CPA classes, taken from industrial producers price index, price index of drinking and drainage water, construction works price index and the price index of communication performances. The index is published with 1995 average = 100 as a base. Value added tax is excluded from the purchase prices of products.

The price index of (production) materials and components consumed in construction contains price indices for selected materials and products (41 groups of CPA) taken from price index of inland industrial producers. The weights for index calculation were derived from the value of consumed construction materials in construction process in 1995.

The indices of consumer prices and indices of living costs are calculated from the prices of individual representatives collected from the network of selected shops and service

business. The base period for calculation of consumer price index and living costs index is December 1995.

Consumer price index presents the price development on a generally averaged level. Living costs indices are also the price indices that show how the different expenditure structures of individual social groups of households influence their changes. The coverage of representatives in the consumer price index as well as in living costs indices is the same besides that some products and services are excluded from those households in which their consumption is insignificant.

Representatives of consumer basket are updated yearly. Consumer basket is divided by COICOP (Classification of Individual Consumption by Purpose) used by the countries of the European Union. In July 2001 the universal consumer basket was changed from 711 to 710 representatives.

Several standards required for calculation of harmonized consumer price index of member countries of the European Union are applied in processing of consumer price index.

Average consumer prices of selected products refer to averaged prices for the SR calculated from the prices surveyed in selected shops and service business.

Definitions

The price indices are created as sample indices of constant structure (influence of structure change onto price index level is excluded). Summary indices are calculated by aggregation of individual simple price indices of representatives by convenient weights system, i. e. structure of receipts from sales of products (expenditure of households for goods and services) in the basic year. The index schemes (system of weights, representatives and respondents systems) are regularly (5 years interval) revaluated and adapted to actual structures. Since 1997 price indices are calculated against December 1995 or average of 1995. For calculation of price indices and living costs indices is used Laspeyres formula.

Producers price refers to contract price agreed between producer and inland customer invoiced for more important business transaction realized in the middle of current month excluding value added tax and costs for transport to purchaser and costs related to transport.

Consumer price is contract price agreed between seller and final consumer. It includes

producer price, price of business performance (wholesale or retail trade margin), value added tax and other taxes (e. g. excise tax).

Source

All published data are the result of regular surveys and processing realized by the Statistical Office of the SR.

Data source for calculation of **price indices in production branch** is the state statistical questionnaires submitted by selected reporting units. More information can be found in monthly publications Price Indices of Industrial Producers, of Drinking and Drainaged Water; Price Indices in Forestry (Raw Wood); Agricultural Products Price Indices; Price Indices of Construction Works, Materials and Products Consumed in Construction and in quarterly publication Price Indices of Products and Services Supplies to Agriculture.

Consumer prices of goods and services for calculation of **average prices and indices of consumer prices and living costs** are surveyed in selected shops and service business in the Slovak Republic. More information on consumer prices and living costs indices can be obtained in monthly publication Consumer Price Indices.

III.1 Territory and Climate

Methodological notes

Selected data on location, area and the highest mountains of the Slovak Republic, meteorological data on selected stations, hydrological data on selected water courses, data on main rivers on the territory of the Slovak Republic, areas of their basins and length of water courses creating a border of the Slovak Republic on neighbouring countries are obtained from non-statistical sources on the basis of measurement, records and methodology used in corresponding institution.

Source

The Statistical Office of the Slovak Republic acquired geodesic data from the Geodesic and Cartographic Institute and from the publication Environment of the Slovak Republic published by the Ministry of Environment of the Slovak Republic. Meteorological and hydrological data were granted by the Slovak Hydrometeorological Institute.

More information can be obtained in given institutes.

III.1–1. Rozloha, hranice a povrch Slovenskej republiky v roku 2001

Area, borders and surface of the Slovak Republic in 2001

Ukazovateľ	V absolútnych čísloch In absolute numbers	V percentách In per cent	Indicator
Rozloha k 31. 12. (km ²)	49 035	x	Area as of December 31, (km ²)
Hustota obyvateľstva na 1 km ²	110,1	x	Population density per km ²
Obvod (km)	1 672,0	100,0	Perimeter (km)
Dĺžka hranice (km) s			Length of the border (km) on:
Českou republikou	251,8	15,1	Czech Republic
Maďarskom	668,6	40,0	Hungary
Poľskom	547,1	32,7	Poland
Rakúskom	106,0	6,3	Austria
Ukrajinou	98,5	5,9	Ukraine
Najnižšie položené miesto – vyústenie rieky Bodrog zo SR (m n. m.)	94	x	Altitude of the lowest place – place where the river Bodrog is leaving the Slovak Republic (metres above sea level)
Najvyššie položené miesto – Gerlachovský štít (m n. m.)	2 655	x	Altitude of the highest place – Gerlach Peak (metres above sea level)
Výškový rozdiel reliéfu – vo vzdialenosti 153 km (m)	2 561	x	Altitude difference of relief – in distance 153 km (m)
Najvyššia vyhasnutá sopka – Poľana (m n. m.)	1 458	x	The highest extinct volcano – Poľana (metres above sea level)
Najväčšia nížina – Podunajská nížina (km ²)	10 000	20,4	The largest lowland – Podunajská lowland (km ²)
Najväčší riečny ostrov – Žitný ostrov (km ²)	1 236	2,5	The largest river island – Žitný island (km ²)
Výškové stupne povrchu (km ²) nížiny (94 – 300 m n. m.)	20 045	41,0	Altitude degrees of surface (km ²) Lowlands (94 – 300 metres above sea level)
nízke vysočiny (301 – 750 m n. m.)	22 089	45,0	Low highlands (301 – 750 metres above sea level)
stredovysočiny (751 – 1 500 m n. m.)	6 350	13,0	Middle highlands (751 – 1 500 metres above sea level)
vysoke vysočiny (1 501 – 2 655 m n. m.)	552	1,0	High highlands (1 501 – 2 655 metres above sea level)
Najdlhšia dolina – Bielowodská (km)	10	x	The longest valley – Bielowodská (km)
Rozloha krasu (km ²)	2 700	5,5	Area of karst (km ²)
Najhlbšia jaskyňa – Starý hrad (m)	432	x	The deepest cave – Starý hrad (m)
Najdlhšia jaskyňa – Systém Demänov- ských jaskýň (km)	30	x	The longest cave – Demänovské Caves System (km)
Celková dĺžka evidovaných tokov – riečná sieť (km)	49 775	x	Length of registered water courses in total – river net (km)
Najdlhšia rieka – Váh (km)	378	x	The longest river – Váh (km)
Najväčšie jazero – Veľké Hincovo pleso (ha)	20,08	x	The largest lake – Veľké Hincovo tarn (ha)
Najvyšší vodopád – Kmeťov (m)	90	x	The biggest waterfall – Kmeťov (m)
Prírodné liečivé zdroje	54	x	Natural curative sources
Využiteľné množstvo podzemných vôd (m ³ .s ⁻¹)	74,37	x	Available volume of subsoil waters (m ³ .s ⁻¹)
Výskyt geotermálnych vôd (lokality)	106	x	Finding places of geothermal waters

III.1–2. Poloha územia Slovenskej republiky

Location of the Slovak Republic's territory

Medzná súradnica Limiting coordinates	Poloha Location	
	Okres District	Obec Municipality
Južná 47°43'54" s. š. Southern 47°43'54" N	Komárno	Patince
Severná 49°36'52" s. š. Northern 49°36'52" N	Námestovo	Oravská Polhora
Západná (Greenw.) 16°50'05" v. d. Western (Greenw.) 16°50'05" E	Malacky	Záhorská Ves
Východná (Greenw.) 22°34'04" v. d. Eastern (Greenw.) 22°34'04" E	Snina	Nová Sedlica

III.1–3. Maximálne dĺžky na ploche Slovenskej republiky

Maximum distances on the area of the Slovak Republic

Ukazovateľ Indicator	Vzdušná vzdialenosť (km) Beeline distance (km)
Spojnice najsevernejšieho a najjužnejšieho bodu Connecting line of the northernmost and southernmost points	226
Spojnice najzápadnejšieho a najvýchodnejšieho bodu Connecting line of the westernmost and easternmost points	429
Maximálna dĺžka v smere poludníka Maximum distance in the direction of the meridian	197
Maximálna dĺžka v smere rovnobežky Maximum distance in the direction of the parallel	395

III.2 Population

Methodological notes

Data on **natural movement of the population** are obtained from statistical reports on population phenomena (marriages, divorces, births, deaths) and from the related population balances.

Data cover all inhabitants residing permanently in Slovakia regardless of their citizenship. In this branch the statistical bodies closely collaborate with further government bodies, which are reporting units (registry, law courts).

The basis for next ten years term balancing is regular decennial population censuses. According to the Law No 165/1998 Code of Acts on Housing and Population Census, May 26, 2001 was a crucial moment for census realization.

Irregular sample population surveys (Microcensus) are a supplementary source.

Demographic statistics includes the statistics on spontaneous and induced abortions.

The methodology and the content of demographic statistics is internationally comparable.

The processing by classification point of the view is done according to the code-lists of administrative-territorial division, nationalities and education.

Number of the population by nationality between two censuses on population is obtained from the balance of movement of the population. The nationality of live-born children is determined by the nationality of the mother.

Death causes have been processed according to the International Statistical Classification of Diseases and Related Health Problems, the tenth revision.

Migration statistics is surveyed in two levels: internal migration and external migration.

Internal migration from municipality to municipality in the same district implies either moving among the urban areas in Bratislava and Košice.

External migration is a change in the country of residence, irrespective of nationality. Names of the countries are used according to the ISO standard No 3166-93.

Stay registration offices of municipal and town offices, district police directorates and departments of border and alien police in Bratislava are included in reporting units.

Data for year 2001 on age structure of population and relative indicators recalculated by them are preliminary.

Population balance for year 2001 is compiled on the basis of results of the Housing and Population Census as of May 26, 2001.

Definitions

Census data concern the resident population according to place of residence.

A municipality is declared a town by the National Council of the SR by a governmental proposal according to section 22, subsection 1 of Law No 369/90 Code on the Municipal Constitution.

Population in **pre-productive age** consists of inhabitants aged from 0 to 14. Population in **productive age** includes men aged from 15 to 59 and women aged from 15 to 54. The **post-productive age** population includes men and women aged 60 and more and 55 and more, respectively, including not specified age.

Census households are the smallest social collectives of persons living in one dwelling jointly managed, between relatives or in other relation. Their base is the family.

Jointly managed households consist of persons living and keeping the household together. The basis is the declaration of censused persons about joint management. Jointly managed households can be as a census household or it can consist of two or several census households.

In comparison with housing indicators it is necessary to consider the different definition of the living room according to the census methodology in 1960 (over 4 m²) and methodology of other censuses (over 8 m²).

Dwelling categories: **Dwellings of I. category** are dwellings with a central heating and with full or partial basic equipment. **II. category** includes dwellings without the central heating and with full basic equipment or dwellings with the central heating and without basic equipment. **III. category** covers dwellings without the central heating or only with a bathroom or only with a water closet. **Dwellings in IV. category** are without basic equipment. Basic equipment of a dwelling means own bathroom or a shower stall with running water in the dwelling or in the house out of the dwelling and own water closet in the dwelling or in the house out of the dwelling.

Mid-year population is the number of the population as of July 1 of the reference year.

Ageing index represents the ratio of post-productive population to pre-productive population.

Neonatal mortality is the number of deaths of children under 28 days of age per 1 000 live-born children in the same period.

Infant mortality are the deaths of children under 1 year of age per 1 000 live-born children in the same period.

A live-born child is a child showing at least one of the following signs of life at birth such as breathing, beating of the heart, pulsation of the umbilical cord, active movement of muscles though the umbilical cord has not been cut or the placenta has not been born. At the same time, the birth weight is

a) 500 and more grams or

b) 499 grams and less if a child survives 24 hours after its birth.

Natural increase in the population shows the difference between the number of live-born children and number of the deceased.

Net migration is the difference between the number of immigrants and the number of emigrants.

Total increase is the difference between the population at the beginning of the period and at the end of the period. It is the sum of natural increase and net migration.

Women aged 15 – 49 belong to the so-called “**fertile age**” group.

Total fertility rate represents the number of live-born children that would be delivered by each woman throughout her whole reproduction period (from 15 to 49 years of her age), provided that during this reproduction period the fertility rate of women by age has not been changed and remains at the level of the year for which total fertility has been calculated.

Gross reproduction rate shows how many live-born girls would be delivered by one woman throughout the whole reproduction period, i. e. from 15 to 49 years of her age, provided that the fertility rate level in the reference year was kept on.

Net reproduction rate shows how many of these girls would live to the mother's age reached at the time of their birth if the mortality level in the reference year continued.

Source

Published data from the Housing and Population Census as of May 26, 2001 are the results of the processing of the Statistical Office of the SR.

Next information on basic data from the Housing and Population Census are available in the publications Basic data, Population, Population by Nationality, Population by Religion, Houses and Dwellings.

All published data for demographic statistics are the result of the collection and the processing in the Statistical Office of the SR, except primary data relating abortions, which are obtained from the sector surveying of the Ministry of Health of the Slovak Republic realized by the Institute of Health Information and Statistics (ÚZIS) in Bratislava and consequently processed by the SO SR.

More information can be found in half-year publication State and Movement of the Population and in annual publications Age Structure of the Population; Balance of Movement of the Population by Communities; Balance of Movement of the Population by Nationality and Marital Status; Life tables and Development of the Population.

III.3 Labour Market

Methodological notes

Labour force sample survey is a permanent monitoring of labour force on the basis of a direct surveying in selected households. The survey is based on a random selection of dwellings in all districts of the Slovak Republic. Every quarter the sample covers 10 250 dwellings, which is 0.6 % of the total number of permanently occupied dwellings in the Slovak Republic. The survey covers all persons aged 15 and over who live in the households of the selected dwellings without regards to permanent, temporary or unregistered stay, institutionally population excepted. Each selected household remains in the sample for 5 subsequent quarters. All surveyed figures are recalculated by the current demographic data on the population of the SR.

In processing by classification viewpoints there are Classification of Occupation, Classification of Education, the Code-List of Regions and Districts and others applied.

The methodology of the survey is recommended by the International Labour Organizations and by the Eurostat.

Employment and wages by enterprise reporting are surveyed in the framework of monitoring of the SR economy development. Persons on maternity leave and armed forces are not included among employees. Processed data for organizations with 20 and more employees are classified by regions and districts, by staff categories, by kind of property and by legal form of organization.

Basic information on the development of wages is completed with data on the **structure of gross nominal monthly wages** obtained by sample survey on the structure of employees wages in the Slovak Republic. In processing by classification viewpoints there are Classification of Occupation, Classification of Education, the Code-Lists of Regions, Sex and Age applied.

Wages statistics also includes the survey on **total labour costs** of employers in the Slovak Republic. The more detailed classification of the labour costs uses the Code-Lists of Regions, Staff Categories, Kind of Property and Legal Form of Organization.

The methodology of the sample survey on the structure of wages and total labour costs is recommended by the Eurostat and responds to the related European regulations.

The processing of selected labour market indicators uses the Branch Classification of Economic Activities (NACE).

Definitions

Economically active population by labour force sample survey (LFS) are persons aged 15 and over who are civilian employed, unemployed or members of the armed forces (conscripts and professionals in military service).

Economically inactive population by LFS are persons who have no job in the reference week because they are students and apprentices, pensioners, persons keeping household, persons in re-training course and therefore they do not seek a job actively during the last four weeks or they are seeking a job but they are not able to start work within 14 days. Persons on additional maternity leave, discouraged workers (they would like to work but they do not seek a job because they do not believe to find adequate job) and persons younger than 15 years are also included.

Economic activity rate by LFS is calculated according to the following formula:

$$\begin{array}{l} \text{Economic} \\ \text{activity} \\ \text{rate} \\ \text{in per cent} \end{array} = \frac{\text{Economic} \\ \text{active population}}{\text{Population in productive} \\ \text{and post-productive age}} \times 100$$

Population in productive age are men aged 15 – 59 and women aged 15 – 54, population in post-productive age are men aged 60 and more and women aged 55 and more.

Employed by LFS are all persons aged 15 and over who are working at least one hour for pay or profit (full-time or part-time job, permanent, temporary, casual or seasonal job) in the reference week, as well as contributing (unpaid) family workers, professionals in military service, persons in civil service and persons working abroad. Data on employed include persons not working in the reference week due to illness, holiday, maternity leave, study, weather conditions and strike or dispute, except persons on long-term unpaid leave from work. Persons on additional maternity leave are not included among employed.

Employees by LFS are persons aged 15 and over who work in the reference week at least one hour and who receive compensations in the form of wage or salary, including members of productive co-operatives. **Employees according to the enterprise reporting** are all the stable as well as temporary employees regardless of their citizenship who have a contract of employment, service or membership with the employing organization. Students attending vocational secondary schools, persons on compulsory military or civil service, persons on maternity and additional maternity leave and persons working upon contract are not included among employees. The number of employees in the economy of the Slovak Republic does not include members of the armed forces.

Self-employed by LFS are entrepreneurs with employees (employers), entrepreneurs without employees (own-account workers) and contributing (unpaid) family workers.

Unemployed by LFS are all persons aged 15 and over who are not working for pay or profit during the reference week, who are actively seeking job during the last four weeks and who are able to start work in the next two weeks. Those persons can but need not be registered at labour offices as unemployed. The category of unemployed also includes persons not in employment who had already found a job which will start within 1 month and person on long-term unpaid leave who do not seek a job because expect their return to work.

Unemployment rate by LFS is calculated according to the following formula:

$$\begin{array}{l} \text{Unemployment rate} \\ \text{in per cent} \end{array} = \frac{\begin{array}{l} \text{Number of unemployed} \\ \text{persons by LFS} \end{array}}{\begin{array}{l} \text{Economically active} \\ \text{population by LFS} \end{array}} \times 100$$

Economically active population in the denominator of the formula excludes persons on additional maternity leave.

A registered unemployed is a person who is neither in employment nor a member of an organization, does not perform any independent gainful activity, nor is getting ready for an occupation and is personally applying, on the basis of a written application, for the intermediation of an appropriate job at labour offices. People who are interested in a job and are in employment or perform an independent gainful activity and are interested in a different

job are not included. Methodology of indicators has been determined by the Ministry of Labour, Social Affairs and Family of the SR and is available in the Law of the National Council of the SR No 387/1996 Code of Acts on Employment.

The registered unemployment rate (methodology of the Ministry of Labour, Social Affairs and Family of the SR) is calculated according to the following formula:

$$\begin{array}{lcl} \text{Registered} & \text{Disposable number} & \\ \text{unemploy-} & \text{of registered unemployed} & \\ \text{ment rate} & = & \\ \text{in per cent} & \frac{\quad}{\text{Economically active}} & \times 100 \\ & \text{population} & \end{array}$$

Economically active population in the denominator of the formula covers employed including persons on maternity and additional maternity leave and registered unemployed.

The registered unemployment rate is calculated from **the disposable numbers of the registered unemployed** who can immediately, after being offered a suitable job, start to work. This practice complies to the convention of the International Labour Organization.

Vacancies are new or out-standing vacancies reported by employers to labour offices.

Average gross nominal monthly wage consists of basic (tariff) wage set by wage rules including basic components of contracted wages and salaries for working overtime, compensation of wage for hours not worked, monthly and long-term bonuses paid according to the performance and evaluation criteria, extra payments for working overtime, the night work, work during Saturdays and Sundays, holidays, for environment damaging health, noise, risky and hard work, in-kind wages express in financial terms and other wage in the form of wage advantages whose level and periodicity are set in advance regardless of the situation in an enterprise.

Total labour costs represent a sum of cost spent by employer to recruit and train their employees, remunerate their work as well as to ensure their social welfare according to obligations adopted. Total labour costs include both direct labour costs and indirect labour costs minus subsidies. **Direct labour costs** are the sum of direct remuneration and bonuses, payments for days not worked, payments to employee's savings schemes, bonuses for being on call to work, bonuses based on profit after taxation and other direct costs. **Indirect labour**

costs include statutory and supplementary social security contributions paid by employer, social allowances, employer's social contributions for apprentices, social benefits, vocational training costs paid by the employer, taxes linked to wages paid by employer and other expenditures paid by the employer. **Subsidies** are the sum of all amounts received in the form of subsidies, which are intended to refund a part or all of the cost of direct remuneration.

III.4 Fixed Assets

Methodological notes

Fixed assets (capital assets) data cover the value of the assets of all legal entities. They do not include the value of fixed assets of tradesmen, population and fixed assets owning by churches in case that the legal procedure and pricing has not been finished. The data on fixed assets for 2000 were presented for the economy in total in the summary table containing basic indicators; all other tables present the corporations with 20 and more employees.

Branch classification is given according to main economic activity of reporting subjects. Ownership is aggregation of included owners of fixed assets into particular groups according to the main kind of ownership.

Fixed assets are given at purchase prices i. e. in prices, for which fixed assets were purchased or produced in time of acquisition. The data express residual price of fixed assets after deduction of consumption, i. e. value of fixed assets yearly permanently consumed in consequence of physical depreciation and foreseeable obsolescence including security from losses of fixed assets.

Definitions

Fixed assets consist of all assets of intangible and tangible character on which an economic subject has the right of ownership or right of management. Fixed assets consist of two groups of assets: intangible and tangible.

Intangible fixed assets consist of incorporation expenses, capitalization development costs, software, copyrights, patents, licenses, trademarks, low-value intangible fixed assets and other intangible fixed assets, whose value in individual cases is more than 40 thousand SKK, the service life is more than 1 year. Intangible assets whose individual components have the value of 40 thousand SKK and less while the service life is longer than one year may be included into low-value intangible fixed assets if so decided by an accounting unit.

Tangible fixed assets are the real estates and separate movable things or sets of movable things whose value is more than 20 thousand SKK in individual case and the operational and

technological function is longer than one year. The accounting unit may set that the tangible fixed assets also include low-value tangible fixed assets whose purchasing price is less than 20 thousand SKK and operational and technological function is longer than one year.

Completed dwellings are those that were passed as acceptable by an approving officer after construction completion. It refers to completed dwellings in constructions intended for living, i. e. in housing buildings, family houses and in polyfunctional buildings. Completed dwellings refer to dwellings acquired by new construction, improvements or another construction repairs.

Average living area of completed dwelling expresses housing space (m^2) per one completed dwelling.

Living floor area of completed dwelling is the area of all rooms of completed dwelling. There are not included common non-housing space serving for all users of dwelling (staircase) and non-housing rooms used by dwellings users (cellars, room for prams, common laundry) and balconies or loggias.

Decrease of dwellings includes dwellings that were eliminated from dwelling fund by particular decision of construction office.

Fixed assets at purchasing price express the value of their acquisition including costs spend for their acquisition. It can be a purchase of new or fixed assets used before by another subject, own-account production, restitution of property based on legal regulations (restitution, legal decisions), dedication, transfers between corporations. The change is, on the other hand, influenced by disposals of fixed assets occurring during the year, e. g. a sale, transfers by legal regulations, liquidation of fixed assets caused by full depreciation or dedication of fixed assets to another corporation or subject.

Fixed assets in residual value express the value of assets after deduction of depreciation from purchasing price or it is difference between purchasing price of fixed assets and amount of created depreciations. Evaluation of fixed assets is given by account data.

Fixed assets by groups include all kinds of tangible and intangible fixed assets.

Consumption of fixed assets represents depreciation – the amount of fixed assets used up during the year as a result of production activity as well as service providing.

Source

All published data are the results of the processing of the Statistical Office of the SR.

More information can be obtained in the quarterly publication Dwellings in the SR and in annual publication Fixed Assets in the SR.

III.5 Research and Development

Methodological notes

Research and development (R&D) surveys are realized in independent research and development institutions in which research and development is their prevailing activity, as well as associated research and development working places in those organizations whose prevailing activity is different from research and development, but their R&D potential calculated to the full time equivalent (FTE) is equal at least to one man/year.

R&D activities include basic research, applied research and experimental development.

Methodology and content of R&D statistics is comparable with international statistics of the European Union.

Licence statistics includes a licence contracts between an inland and a foreign partner. Licence surveys are carried out in all enterprises with 20 and more employees, which have valid licence contract with a foreign organization during the whole period of validity of the licence contract till year, when the validity of the last licence is expired.

Data are given only on licence contracts made in the current year, not on all licences that were in force in the given period.

Industrial legal protection statistics contains patents, utility models, industrial designs and trademarks.

Statistical survey on **certification** includes certified products and certified quality management systems. Reporting units are the industrial enterprises with 20 and more employees. The survey is realized with two-years periodicity.

The data are given only for the new products introduced and certified in the current year and for new organizational parts of the reporting unit that obtained a certificate for their quality management system by the ISO 9000 standards in the current year, not for certificates granted in the past years which were valid in the given year.

Data are given in the prices and by methodology of the current year.

Definitions

The number of **R&D employees** includes only persons employed directly in the field of research and development as well as persons providing direct services to research and development. Total number of R&D employees includes also pedagogical staff at higher education institutions who within the framework of their work to a certain extent participate in research and development.

Category of “researchers” comprises employees essentially important to the creation and use of the scientific knowledge.

Technical and equivalent personnel includes employees participating in research projects by performing scientific and technical tasks usually under the supervision of researchers.

Supporting staff includes qualified and non-qualified workers, secretaries and other employees participating in the work on R&D projects. Further there are included other managers and administrative workers dealing with personnel and financial matters whose activities are qualified as a direct service supporting research.

Expenditures on research and development comprise total amount of expenditures spent in an organization on R&D activities, i. e. they are internal expenditures. Expenditures spent out of the organization include only those serving for support to the internal research and development (for instance purchase of equipment for R&D institutions). Depreciation of buildings, machines and equipment is excluded from statistical observation of internal expenditures on R&D.

Current expenditures comprise costs of own activities of organizations and workplaces for research and development and costs for tasks solved by the own capacity of an organization and a workplace. (It is a sum of operational and financial costs related to R&D activities).

Licence is a contract between a domestic organization and a foreign partner for the acquisition (purchase) or provision (sale) of the right to the use of: an invention under copyright, industrial design, a trademark of an original owner and know-how. Licences are divided from the point of view of their purchase or sale into:

a) Passive licence is a licence bought from abroad, on the basis of which domestic organizations produce or use it.

b) Active licence is a licence sold abroad.

According to the Law No 527/1990 Code **patents** shall be granted for inventions which are new, involve an inventive step and are susceptible of industrial application.

It is possible to protect as **utility models** technical solutions which are new, exceed the framework of the mere professional ability and are susceptible of industrial application but do not comply with the strict terms for the granting of a patent. Contrary to the protection by a patent, neither process or production nor biological reproductive matter shall be protected by a utility model.

External appearance, which shall be new and susceptible of industrial application is considered as an **industrial design**. The external appearance shall comply with these conditions: it shall be two- or three-dimensional and have the unique features in particular of its shape, contour, design, colour arrangement or combination thereof.

Trademark shall be denomination consisted of the words including personal names, letters, numbers, designs, product's shape or its packing or combination thereof as well as colour combinations, which are capable of distinguishing goods and services of different entrepreneurs and which have been registered in the trademarks register.

Classification of inventions by subject is based on the international patent classification.

Certified products are the products with a valid certificate issued either by an accreditation place on the basis of the Law on State Testing Lines or by a foreign organization. A certificate verifies that the properties of a certified product are in conformity with the relevant standards, technical documents or laws.

Certified quality management system is a system of quality provision of a proposal, development, production, assembly, installation and service in a productive organizational component of a reporting unit. This system was certified by a Slovak certification body or a foreign organization.

Source

All data on R&D, licences, certified products and certified quality management systems are from the results of the Statistical Office of the SR processing. Data on industrial legal protection are kept by the Statistical Office of the SR from the informational system of the Industrial Property Office of the SR.

More information can be obtained from annual publications Selected Indicators of R&D Organizations and Licences and from publication Certified Products and Certified Quality Management Systems, which had during period 1997 – 2001 two-year periodicity.

III.6 Organizational Structure of the Economy

Methodological notes

Data on organizational structure of the economy are compiled on the basis of data kept in the Register of Organizations of the Statistical Office of the SR. The register is created and updated by the Statistical Office of the SR according to the Law No 322/92 Code on Government statistics in wording of later regulations. The Register of Organizations of the SO SR is regularly updated by data from Business Register, Tradesmen Register and from statistical surveys. It contains identification and classification characteristics on legal persons and natural persons-entrepreneurs.

Data in the tables concern only those legal and natural persons – entrepreneurs specified in the Register of Organizations of the SO SR as economically active.

Definitions

Legal persons are legal entities. The law adjusts their existence independently on individuals or institutions that are their owners or their members.

Natural persons – entrepreneurs are persons, who undertake on their own liability according to special rules. These are tradesmen (persons running business on the basis of the tradesmen law), persons with freelance professions (persons running business on the basis of a law other than tradesmen law e. g. lawyers, physicians, auditors and others) and self-employed farmers.

Enterprises are legal persons performing systematic activity to make profit. There are included corporations (enterprises in ownership of groups of subjects e. g. joint stock companies, co-operatives, limited partnerships etc.) and quasi-corporation (enterprises in ownership of one subject).

New founded entrepreneurial subjects are those, which were founded as legal persons or natural persons – entrepreneurs and in surveyed period were included in the Register of Organizations of the SO SR.

Extinct entrepreneurial subjects are legal persons or natural persons – entrepreneurs

cancelled according to the legal rules and in the surveyed period were excluded from the Register of Organizations of the SO SR.

Non-profit oriented institutions are legal persons serving to financial and non-financial corporations, government and households e. g. budgetary organizations, subsidized organizations, whose receipts don't exceed 50 % of presented costs, associations, political parties, churches and others.

Public sector includes enterprises in state, municipal and international ownership being under the state control.

Private sector includes enterprises in ownership of private inland and foreign legal persons as well as natural persons – entrepreneurs and enterprises with foreign interest not being under the state control.

Foreign ownership includes subjects founded and controlled by a foreign legal person or natural person – entrepreneur.

International ownership includes the subjects that were founded jointly by a inland and a foreign legal person or a natural person – entrepreneur.

Source

Source of data is the Register of Organizations of the Statistical Office of the SR.

IV.1 State and Protection of the Environment

Methodological notes

In total number of **protected territories** are included all categories of protected territories of a nature and of a landscape: protected landscape areas, national parks, natural reserves, national natural reserves, natural monuments, national natural monuments and protected areas.

Some protected territories from categories natural reserve, national natural reserve, natural monument, national natural monument and protected area are also located in the area of protected landscape areas or national parks, therefore their area is included into the area of these categories, too.

Penalties for air pollution as well as in the sector of water management, waste management and nature protection are imposed on legal entities for breaking their duties provided by the relevant laws and administrative orders.

Intensity of **immission load** in interaction with ecological factors is expressed by zones of endangered forests – categories A, B, C, D:

Zone A comprises areas with a strong long-term load in the localities exposed to intensive air streams from immission sources (local and from long-distance pollutant transport).

Zone B includes areas under the same immission conditions as Zone A but under better ecological conditions in the localities partially protected against direct air streams from immission sources.

Zone C comprises areas under more favourable ecological conditions with a lower immission load.

Zone D are protected fluvial areas of various altitudes with a low immission load and low level of air pollution.

Endangered zones are those parts of forest ecosystems where intensity of load together with ecological conditions and climatic factors causes their dynamic damages. Attributes of these zones are the level of immission load and longevity of stands of a specific species composition derived from the model for mature spruce stands.

Degrees of damage to stands are derived from the state of stands and are based on the evaluation of defoliation and depigmentation of trees. A qualification scale of the international health monitoring is applied.

0 – Healthy trees, damage (0 – 10 %)

1 – Slightly damaged trees (10.1 – 25.0 %)

2 – Medium damaged trees (25.1 – 60.0 %)

3 – Heavily damaged trees (60.1 – 90.0 %)

4 – Dying and dead trees (90.1 – 100 %)

Abiotic injurious factors (drought, wind, snow) are important from the point of view of volume of salvage felling. Together with immissions produce conditions for further activation of biotic factors.

The most important biotic injurious factors are insect, vertebrate animals (mainly game animals) and fungal diseases.

Categorization of game to commercial and predacious animals is from practical point of view relative and is important mainly from economic standpoint. For this reason a notion of “predacious animals” started to be used under which belong individual game species (predators) that cause damage to commercial game (it is a component of the food chain). Division of game into furred and feathered one is a species division and is of biological importance.

Data on **xenobiotics** in foodstuff were received from records on individual cases during the reference year.

As a limit is defined the highest acceptable amount of xenobiotics in the given foodstuff; is determined by the Bulletin of the Ministry of Health of the Slovak Republic, Part 9 to 13, of July 15, 1996.

Values presented as average represent an average content of xenobiotics in concerning foodstuff calculated from individual contents.

Data on **waste** originating in the territory of the Slovak Republic are surveyed according to the valid legislation.

The separate table shows the amount of municipal waste and similar waste not treated by municipality and which was produced in activities of legal or natural persons entitled to enterprising in particular branches of the economy of the SR.

Definition

Protected territory is geographically defined territory determined or controlled and administrated for the purpose to reach the specific aims of protection.

Commercial forests are those, whose main purpose is a production of quality timber while ensuring other roles of the forest.

Protective forests have function of protection and conservation of biological using.

Forests of special purpose are those having functions resulting from specific important social needs because of which the way of management is adjusted.

Hunting ground is continual hunting land up to 500 ha at least.

Xenobiotics in foodstuff are those that are not a natural component of foodstuffs and they are not characteristic for the given kind of foodstuff or their amount can have a negative impact on the human health.

Waste is an article, its owner wants to get rid of or things, which must be removed from the point of view of care on proper living conditions and protection of environment.

Municipal waste is the waste originating in municipalities and is treated further by the municipality. Households waste and waste produced in activities of municipality, legal entities, transport, recreation and sport are included.

Source

Data on protected territories and national parks are provided by the Ministry of Environment of the SR. Data on state of stands are provided by the Research Institute of Forestry and the Institute of Forest Management in Zvolen. Data on hunting ground, hunting and spring stock of game are taken from materials of the Ministry of Agriculture of the SR. Further information can be obtained in these organizations.

Data on waste are the result of the processing of the Statistical Office of the SR. More information can be obtained in the publication Waste in the Slovak Republic.

IV.2 Air Quality

Methodological notes

Data on **emissions of major pollutants** by economic activities cover pollution of air by injurants produced by industry, energetics, agriculture, transport, housing and municipal spheres. The quality of air depends on the level of emissions from individual sources of air pollution and is expressed as immissions monitored by individual monitoring stations.

Data on emissions for energetics and process combustion include data for emissions from process combustion and from stationary units for fuel combustion with thermal output of 0.2 to 5 MW which are the part of technological units.

Local heating facilities also include central heating with the output up to 0.2 MW.

Emissions from industrial technological processes are the sum of emissions from relevant technological processes and emissions from combustion processes which are the part of the source (boiler house).

Burdened regions are declared on the basis of the Decree of the Ministry of the Environment of the SR No 112/1993 Code of Acts on the definition of regions requiring special air protection and on the operation of smog signal and regulation systems.

Levels of **immissions in selected localities** are assessed on the basis of a continual measurement done at individual monitoring stations.

Data on regional air pollution are presented for the four monitoring stations (Chopok, Liesek, Stará Lesná, Starina), which are the part of the European monitoring network EMEP.

Levels of **surface ozone** in selected monitoring station are assessed on the basis of the eight-hour concentration (time of measurement is from 9 a. m. to 5 p. m.).

Regional pollution of precipitation informs on acidity and chemical composition of precipitation obtained from regional monitoring stations and from city station in Bratislava.

Definitions

Mobile sources of air pollution are the road, railway, water and air transport equipment with explosion engine or other driving engines.

Stationary sources of air pollution are all the other sources emitting pollutants.

Region declared burdened is at least 50 square kilometres large and:

- an individual annual immission limit is exceeded,
- half-hour or daily immission limits of two pollutants for SO₂, NO_x, solid emissions and CO are exceeded in more than 5 % of cases,
- bad smell pollutants are present in concentrations bothering the population.

Indicator called “maximum 30” represents the maximum level of the thirty-minute concentration in an observed year.

Regional air pollution is a pollution of the atmosphere boundary layer in the countryside sufficiently far from the local industrial and urban sources. Injurers in this layer of the atmosphere are getting involved into the global circulation.

Source

All data on air quality are taken from the Slovak Hydrometeorological Institute, where further information is available.

IV.3 Water

Methodological notes

Water-supply systems and sewage include waterworks activities related to the administration and operation of water-supply and sewage systems, i. e. production and supplies of drinking water and drainage of sewage water and its purification.

Length of dikes protecting against flooding is measured in the axis of a dike and on each bank separately. Length of artificial canals and intakes includes also canals and intakes kept in covered profiles.

Values of individual pollutants drained off into the water courses are presented for the water plants and sewage companies as well as for the river-basin companies.

Values of the **water pollution** are shown for producers monitored by the water plants and sewage companies as well as river-basin ones.

Categorization into individual quality categories by five groups of indicators is done by the STN 75 7221 Classification of the Surface Water Quality valid since January 1999.

A set of indicators – oxygen balance

B set of indicators – basic physical and chemical indicators

C set of indicators – nutrients

D set of indicators – biological indicators

E set of indicators – microbiological indicators

Surface water by water quality is categorized into the following 5 categories:

Category 1 – very pure water

Category 2 – pure water

Category 3 – polluted water

Category 4 – heavily polluted water

Category 5 – very heavily polluted water

Definitions

Dam is an inflating construction damming up the river-bed or, exceptionally, valley that

serves for formation of a reservoir to get a permanent or temporary inflation of the water for various waterworks purposes.

Water reservoirs are these from which water offtake for public water supply is realized.

Controllable volume of water reservoirs is a total controllable capacity of reservoirs where it is possible, regardless of tributaries to the reservoir, to accumulate and to empty the water as necessary. Retentive volume of water reservoirs is a controllable protective capacity of the reservoir. Reserve volume of water reservoirs is a part of the total reservoir capacity that serves for improving flow and for securing water taking in drought areas.

Area of territory endangered by floods includes the area that is endangered by the high water. High water is 10 years old water (Q 10) and 100 years old water (Q 100). We give approximate figures.

Area of the territory protected against floods includes the area that would be flooded because of higher flows of the water in water-courses in case that the retentive capacities of reservoirs, adjustments to water courses or preventive dikes were not built.

Production of drinking water includes total amount of drinking water produced in water-supply stations themselves under the administration of companies of water plants and sewage and municipalities after adding an amount of drinking water taken from other waterworks organizations or from other water suppliers (legal persons) and after subtracting an amount of drinking water delivered free of charge to waterworks organizations (e. g. among units of water plants and sewage companies).

Invoiced water includes the amount of drinking water sold to direct customers.

Non-invoiced water includes losses of the water in the pipe network, own water consumption or possible free water supplies, e. g. for fire protection purposes.

Sewage disposal plants are facilities purifying sewage water, applying mechanical and biological way of purification or the so-called third stage of purification applying mechanical and biological additional purification. Sewage disposal plants do not include facilities for rough pre-purification of sewage (sand-traps, oil-traps, etc.), septic tanks, cesspools and simple facilities that are not observed and served regularly.

Suspended solid pollutants are substances determined by water filtration and dehydration of the rest (on filter) at 105 °C to constant weight.

Oil pollutants are the substances extracted from water excluding polar substances that can be separated from the extract by a standard way.

Biochemical oxygen demand (BOD) is the volume of oxygen consumed in aerobic biochemical decomposition process of organic compounds present in the water for the period of 5 days at standard conditions.

Chemical oxygen demand (COD) is a consumption of oxygen (O_2) by dichromate method.

Source

Data on water management are obtained from the surveys realized by the Statistical Office of the SR and data on water quality are taken from the Slovak Hydrometeorological Institute and from the State Health Institute.

More information can be obtained in the publication Water Management and in the organizations mentioned above.

V.1 Agriculture

Methodological notes

Agriculture includes all legal entities (legal and natural persons) which are active in crop and livestock production, in related service activities and fish-hatcheries.

The basic statistical unit for the purposes of the statistics on soil fund and crop production, is considered as:

- a) total of agricultural land with the area larger than 0,10 ha;
- b) total of agricultural land with the area up to 0,10 ha
 - if the products from this land are usually sold
 - if there is a vineyard on the land with the area larger than 0,05 ha;
- c) total of the forest land or ponds with the area larger then 0,10 ha if these cultures are not a part of the agricultural establishments under the point a).

Every breeder of farming animals who breeds them for sale or for next processing including agricultural enterprises and other breeders without agricultural land or with agricultural land up to 0,10 ha in area are basic statistical units for the purposes of the livestock production statistics.

In year 2001 was realized the first **Farm Structure Census** for reference period since November 1, 2000 till October 31, 2001. Status indicators were surveyed as of October 31, 2001. This survey substituted current annual statistical surveys: Register of Farm Animals, Machines and Equipment in Agriculture and Annual Statement on Crop Production.

Reporting units were created by legal and natural persons running business in agriculture – primary producers and population in all municipalities excluding selected city localities, where is not possible to realize agricultural activity.

Status of **soil fund** as of January 1, of the following year is given as the status as of the end of the current year. All data on land are investigated as areas of individual kinds of lands. Total agricultural land of the area up to 0,10 ha is also included.

All recalculations concerning intensity of agricultural production take into account either agricultural or arable land belonging exclusively to agricultural establishments.

Summary data on gross agricultural production (see chapter I. Slovakia from 1960 to 2000) are for agriculture in total, i. e. including calculation for small enterprises and population. The

structure of **gross agricultural production** is given for incorporated entrepreneurial entities employing 20 and more employees.

In **crop production** data on sown area and data on crops production are given for agriculture in total.

Production of agricultural crops represents a total yield of the given crop which was harvested under standard humidity by Slovak Technical Standards and purity without harvest losses including species of minor quality used for feeding (backgrown grain, small potatoes etc.) excluding seedlings and saplings. Beet harvest is given without reduction for impurities. The crop of feed-stuffs is recalculated to the value of hay according to conversion coefficients. Vegetable production is represented by the total crop of vegetables also from repeated areas including forced early sorts.

Harvested areas of particular sorts of vegetables include also areas where vegetable has been sown or planted as a main crop as well as all resowings and reseeds including covered areas and home-garden areas.

The number of fruit trees includes all fruit trees regardless of age and shape namely bearing trees, newly planted ones or superannuated, non-bearing ones.

The surveying on balance of cereals covers only the agricultural enterprises growing cereals. The increase of cereals includes own crop, purchase, imports and another receipts. The consumption of own seeds, sales of perquisites to their own members and employees, sales to the trading and processing organizations, exports, fodder consumption and others are included in decrease.

Consumption of fertilisers is surveyed without private plot owners for the economic period, i. e., from July 1, of the current year until June 30, of the following year.

Crop production is surveyed by selected kinds given in the list of products and services in agriculture AGROPROD.

In the **animal production** cows, sows and ewes are the breeding ones that at least once farrowed (without sows excluded from breeding and included in feeding). Poultry involve hens, cocks, goose, ducks, drakes, turkey-hens, turkeys including young ones of these species.

Meat production includes the total volume of sales (by primary producers) of slaughtered cattle, calves, pigs, sheep and goats in live weight delivered to slaughter increased by other sales and self-sufficiency. Besides total sales, milk production includes self-sufficiency and also milk that has been sucked or fed by calves. Production of sheep milk covers only milked

sheep milk from incorporated agricultural enterprises and from selected self-employed farmers.

Fishing includes freshwater fish determined for consumption and market purposes.

Sales data cover sales of incorporated agricultural enterprises and selected self-employed farmers with reporting duty. Data on sales of all products are surveyed for a calendar year. Sales of cow milk include also the sales of cream. Sales of consumer eggs include all hen eggs without eggs for hatching.

The level of production is given per average area of agricultural land and mid-year population in the current year. Livestock is given per agricultural or arable land, respectively, as of December 31 of the current year.

Oil plants group includes all oil plants except for flax and hemp seed. Group of total slaughtered animals includes the production of slaughtered cattle, calves, pigs, sheep, goats and horses.

Numbers of **machines and means of mechanization** are surveyed for all agricultural enterprises and organizations providing services to farmers without non-incorporated self-employed farmers. Recalculation of machines and means of mechanization per utilized area is given for the area of all agricultural enterprises. Cereals, potato and beet harvesters are calculated per harvested area and potato planter per sown area.

Definitions

Agricultural land is the sum of independent kinds of lands directly serving in agricultural production for crop production. It is a part of soil fund.

Arable land is created by lands for growing cereals, root-crops, industrial crops, vegetables and another agricultural crops according to the specified sown methods. There are included lands temporary overgrown with grass or used for growing of fodder lasting more years as well as hotbeds and hothouses if they are built up on arable land.

Degree of ploughing of land is expressed by the ratio of the arable land to the agricultural land.

Gross agricultural production is the sum of sales out of enterprise, sales within the enterprise and changes in stocks at the beginning and at the end of the year (Gross Turnover

Method). It is calculated at natural units (pieces) and at constant prices of the year 1995 or at current prices.

Area sown refers to a spring productive area (i. e., arable land area, sowing area in orchards and gardens including home gardens and the area of grass lands and pasture lands temporarily ploughed for reclaiming), expected to bear a crop in the current year. The following kinds of areas belong here:

- a) areas of winter wheat sown in autumn of the previous year and preserved until the spring sowing in the current year
- b) areas of spring corn sown in spring of current year
- c) areas of many years lasting crops sown in past years and preserved until the completion of sowing in the current year
- d) areas that were not sown due to unfavourable climatic conditions as well as areas temporarily fallow.

Hectare yield refers to average yield from 1 hectare and it is calculated as a ratio of total yield of given crop and area on which the crop was gathered.

The average annual milk yield expresses the volume of milked and sucked milk per one cow. It is calculated for average number of cows per year excluding meat breed cows (without market milk production).

An average egg-laying per one hen expresses the number of totally annual laid eggs recalculated per one hen.

Rearing of calves, pigs and lambs expresses the difference between live-birth and dead young (including all confiscation). Rearing of calves and pigs is calculated for an average number of cows or sows, rearing of lambs for the number of ewes as of January 1 of the current year.

Loss-rate of calves and lambs is counted until the age of 3-months and of pigs until weaning.

Livestock unit is the weight of 500 kilograms for which individual farming animal species and their categories are recalculated.

Regular employees are those, whose job in an agricultural enterprise is a single or a major activity and who have a labour contract (contract on labour conditions). Here also belong those crop production workers with whom a contract was made for a minimum of 150 working

days in a calendar year. The days actually worked out and days considered to be as work days are being included in those 150 working days.

Farm is technical, economical and self-managed unit producing agricultural products. It interests in crops grown on arable land, gardening, viniculture, fruits production, animal products and livestock). The farm can also produce non-agricultural products and provide services together with agricultural activity.

Permanent employees surveyed in the Farm Structure Census are those, who worked for period since November 1, 2000 till October 31, 2001 (reference period), who have labour, service or member relation (including labour contract). The employees every week, regardless week length, performed agricultural works in the farm and were remunerated by wages or bonuses (financial or in kind). There are included persons, who started work at the farm but could not work for whole reference period because of seasonal character of the work, holiday, compulsory military service, illness, maternity leave, termination of labour contract with the farm, total work interruption in the farm by reason of an accident, natural disaster, etc.

Utilized agricultural land is the land regularly used by a farm for their production activity regardless of ownership (private or rented), There is included land reserved for regeneration usually for one vegetal period. Areas, which were not utilized by economical, social or another reasons during reference period are excluded.

Farming is the person with legal liability for farm activity. He can be farm owner or tenant. Every farm must have farming.

Family members of the farming are the wife or the husband of the farming, descendants and ancestors (including relatives obtained by marriage or by adoption), siblings of the farming or siblings of his/her wife or husband. These persons don't have to live in one household with the farming but have to regularly perform agricultural activity.

Head of farm is the person responsible for regular activity and managing of the farm. He can be identical with the farming, but he can be another person charged by this activity.

Source

Published data are results of the Statistical Office of the SR processing except data on soil fund taken from the Office of Geodesy, Cartography and Cadastre of the SR, data on apiculture are taken from the branch report of the Ministry of Industry of the SR and from the

Slovak Union of Apiarists and the Association of Apiarists of Slovakia. Data on the consumption of fertilisers were taken from the Central Control and Testing Agricultural Institute.

Further information can be obtained from publications Animal Production and Sales of Farming from Primary Production; Selected Economic Indicators and Employees in Agriculture; Census of Area Sown with Crops as of May 20, of Current Year; Final Data on Crops; Final Data on Harvest of Fruit and Vegetables; Register of Farm Animals, Machines and Equipment in Agriculture as of December, 31; Gross Turnover – Selected Indicators on Agriculture; Structure of Employees in Agriculture.

Data on yields of agricultural crop, vegetables, fruit, animal production and livestock, machines and equipment in agriculture for 2001 are published in publication Farm Structure Census.

V.2 Forestry

Methodological notes

The branch of **forestry** includes basic data on structure of utilized forest land, basic data on work in silviculture activities, on regeneration and protection of forests, basic data on logging activities and timber deliveries. The data are given for state forest enterprises, military forests enterprises, forests of industrial and farming companies, municipal forests and organizations covering private forests as well as land associations (land-registers, composesorates, cottar forests and other) including entities non-incorporated in the Business or the Tradesmen Register.

Definitions

Utilized forest land is all land that is being actually managed. It includes timbered land, i. e. land used directly for forest production, actually afforested or temporarily deforested with the intention of reforestation as well as forest-free area, i. e. temporarily deforested part of the forest land serving indirectly to forest management.

Land designed for afforestation comprises the whole area designed for afforestation including land taken over to be afforested (former non-forest – mainly agricultural – land). Unsuccessful afforestation increment comprises areas of unsuccessful plantations in observed and previous years.

Afforestation stands for land actually afforested by sowing and planting (including established plantations). It comprises areas afforested for the first time as well as enrichment planting recalculated per area of full afforestation.

Production of plants includes the number of plants taken from forest tree nurseries for afforestation and sale purposes in observed year.

Forest tree nursery is the land designed for the production of planting stock.

Cleaning is usually the first silviculture intervention in young immature stands.

Thinning includes mainly regulations of stand composition, shape tending and stand stabilisation.

Logging includes logged mass of wood in thousand cubic metres i.b. that was received as a final assortment or as a green trunk including logged mass from so called “self-production”. The mass is included regardless of type of silviculture or logging interventions it was received from, including salvage felling.

Self-production stands for volume of harvested timber left to the subject who felled it for a fee to cover self-supplying of inhabitants with fuel wood.

Timber deliveries comprise mass of wood (full-size timber, non full-size timber) in thousand cubic meters i. b. designed for a sale to domestic and foreign customers and delivered for own consumption regardless of delivery place.

Source

Published data on forest management are the result of the Statistical Office of the SR processing and they are completed from the materials of the Institute of Forest Management in Zvolen as well the Research Institute of Forestry in Zvolen.

More information can be obtained in the publication Forest Management and in above mentioned organizations.

V.3 Industry

Methodological notes

Industry includes activities connected with extraction of minerals, manufacturing, production and distribution of electricity, gas and water. It is divided according to the Branch Classification of Economic Activities, ownership, size category by number of employees and by the Main Industrial Groupings.

Industrial production index (IPI) is calculated according to the methodology valid in the European Union on the base of the Standard on Short-term Indicators. IPI calculation is based on the change of selected products volume and on the two-step weight system. The index expresses a change in industrial production in current year in comparison with base year. It is calculated from statistical survey results in reporting units (enterprises) with the main industrial activity and with 20 and more employees regardless of legal form and in the selected enterprises with non-industrial main activity or with number of employees up to 19.

Production of selected industrial commodities is given in the aggregation of products according to the list of industrial products PRODSLOV valid since 1998 and elaborated on the base of international classification of products PRODCOM.

Receipts from industrial activity are given without value added tax and excise tax.

Data on financial indicators are presented in the chapter II.2 Finance.

Definitions

Receipts from industrial activity present the value of receipts for sales of own industrial products including receipts for sales of own products in own company store, own works and industrial services realized in the reference period for inland and foreign customers.

Receipts from sales for export include the sale to a foreign customer that is realized by the manufacturing enterprise or by an intermediary organization. The sold products are transported directly from the store of the manufacturing enterprise abroad.

Industrial production index expresses the change of production volume given in physical terms.

Production of selected industrial commodities includes the products intended for sale outside the enterprise as well as those consumed for manufacturing purposes (i. e. intra-plant consumption) and for industrial services (i. e. adaptations, repairs, maintenance, installation, contract treatment) and they are intended for outside sale.

Monthly labour productivity based on receipts from industrial activity is expressed by volume of the receipts from industrial activity per one employee in industry per month.

Source

All published data are the result of the processing in the Statistical Office of the SR.

More detailed information can be obtained in monthly publications Selected Indicators of Industrial Organizations and Industrial Production Index, in quarterly publication Production of Selected Goods in Physical Terms and in annual publications Results of Annual Surveys in Industry by Enterprises and Establishments and Yearbook of Industry.

V.4 Energetics

Methodological notes

Data on energy sources have been taken from the producers, importers, exporters and fuel and energy traders. Data on use are obtained from statistical units consuming individual kinds of fuel and energy.

Definitions

Primary energy sources include natural resources (brown coal, lignite, crude oil, natural gas, heat and electricity) and they are modified by a balance of imports and exports and by drawing of stocks. They also include the balance of imports and exports and drawing of the other resources stocks such as hard coal, coke, brown-coal briquettes, oils, petrol, light and heavy fuel oils, kerosene, coke-oven gas, blast furnace gas and other solid, liquid and gaseous fuels.

Final consumption expresses the consumption of fuels and energy before their input to appliances where they are used for final utility effect, so no other sort of power (except for secondary energy sources) arises.

Secondary energy sources are such sources, whose utilization is technically possible and they arise as:

- result of fuel consumption and energy used in technological or energy process
- an technological waste utilizable in energetics.

Input is the amount of fuel (energy) entering directly the energy process with the intention of its upgrading (e. g. production of coke, production of liquid fuels from crude oil, production of heat and electricity).

Operating consumption is fuel (energy) consumption for operation of energy processes for fuel improvement as well as fuel (energy) consumption for extraction and preparation of fuels.

Consumption of fuels and energy is consumption including charging and operational consumption in the process of generation of electricity and production of heat as well as in the

fuel improvement processes. Electricity consumption also includes consumption of energy for pumping of water in hydro-electric power plants.

V.5 Construction

Methodological notes

The production of the **construction branch** covers construction works realized on the territory of the Slovak Republic and abroad by supplier construction enterprises with the major activity in the field of building and construction registered in the Slovak Republic (including tradesmen) and by construction establishments of non-construction enterprises. Predominating building and construction activity of the enterprise is determined by its registered appurtenance to section 45 of Branch Classification of Economic Activities (NACE).

Data on contractually agreed inland construction production in new construction, reconstructions and modernisations are structured into particular branches of construction types by the Classification of Types of Constructions (CC). Data on construction production carried out by own employees by the Classification of Products by Activity (CPA) are divided by individual kind of construction activities.

Data are presented in methodology and organization structure of the current year, at current prices and constant prices converted on the average of 1995.

Definitions

Construction production carried out by own employees comprises the value of construction production realized by employees included in the registered number of employees of the given construction enterprise as well as by persons working with the enterprise upon contract (including productive work of apprentices). Included is also the production within own capital construction as well as production for other suppliers of construction production including production produced abroad.

Contractually agreed construction production is the value of construction production based on a delivery contract for a customer. It is the sum of own performances from construction activity including the production carried out by sub-contractors.

Construction production in **new construction, modernizations and reconstructions** is

the value of construction inland production connected with acquisition of the new tangible fixed assets and with rebuilding, extension or reconstruction of the existing ones.

Maintenance and repairs are the value of works realized on existing buildings or construction parts of tangible fixed assets removing partial depreciation or damage by repairs to make them functional.

Other construction production comprises all production that cannot be included in new construction, reconstructions, modernizations and repairs. It includes, for example, construction work for geological survey, removing of mined earth carried out by contractors and demolition work (in the site where another construction will not be erected instead), etc.

Completed dwellings by construction technology represents the number of dwellings built by suppliers in the new buildings for habitation classified by used material of vertical load-bearing construction. Completed dwellings in family houses realized “on key” (fully completed dwelling construction) are also included in this number.

Workers carrying out construction work comprise employees (workers) from the average registered number of employees included in groups 7, 8, 9 of the Classification of Occupations who are involved fully or mainly in construction activities of the enterprise.

Average monthly wage is calculated from the total wages (without other personnel costs).

Labour productivity is expressed as the amount of the construction production per one employee or worker engaged in construction work.

Source

All published data are the result of the processing in the Statistical Office of the SR.

More information can be obtained in monthly publication Construction Production, Employees and Wages in Construction Enterprises, in quarterly publication Stock of Orders and Financial Indicators of Construction Enterprises and in Yearbook of Construction.

V.6 Transport, Post and Telecommunications

Methodological notes

The branch of transport, post and telecommunications includes entrepreneurial subjects providing services in the fields of public and non-public transport, posts and telecommunications.

Public transport includes enterprises with transport as prevailing activity carrying out the inland or international transport of goods and passengers including supporting and auxiliary activities in the transport (excluding travel agencies).

Data on public transport are for all incorporated transport enterprises and tradesmen enrolled in Tradesmen Register.

Non-public transport includes incorporated enterprises, which are classified by their main activity into branches different from transport, realizing transport activities for internal or external needs. Transport activity for internal needs includes the transport of goods for own production. Transport activity for external needs is paid transport service according to the legal relationship based on the agreement between transport operator and natural or legal persons whom the transport of goods, another things as well as passengers will be realized for.

Transport of goods given in tons and performances given in ton-kilometres are surveyed according to the Classification of Goods in Transport NST/R which contains 24 commodity groups.

Roads and motorways are divided for roads I., II. and III. class and motorways.

Local communications include data for local roads for class I. to IV. and they are surveyed once within five years.

City transport is ensured by the branches of the city transport companies in Bratislava, Košice, Prešov and Žilina. In other towns of the Slovak Republic the city transport is carried out by companies of the road passenger transport.

Air transport is presented for all enterprises performing air transport regardless their prevailing activity given in the Business Register.

The branch of **post and telecommunications** includes incorporated enterprises that provide postal service, financial service and operation of the telephone, radiotelephone,

telegraph, telex and documentation service. Data are presented for state post, courier activity, telecommunication services in fixed and mobile telephone network, technical equipment within telecommunication and radiocommunication service.

Definitions

Receipts from own performances and goods at current prices without VAT are receipts for own products, receipts from sale of services and receipts for goods.

Receipts for freight and passenger transport without VAT at current prices express revenues for provided services in transport for enterprises and tradesmen with transport as main activity.

Roads and motorways are connected line structure serving for transport connection between residence units and centres of inland or international value. Cross-roads, resting places, bridges and tunnels are included.

Local communications include all accessible and used streets, roads and public places excluded from roads and motorways network lying in built-up municipal areas or in areas intended to be built-up.

Transport of goods expresses real mass of transported goods (load) realized by means of particular kind of transport by the transit line. They are surveyed according to the commodity groups.

Performances in ton-kilometres present value of total transported performances in ton-kilometres carried out by freight transport means of particular kind of transport. They are calculated (tons x kilometres) for every drive individually.

Net ton-kilometres in railway transport express a net transport performances of locomotives by actually covered distance.

Gross ton-kilometres of traction in railway transport represent product of gross weight of train and train-kilometres in goods resp. passengers transport.

Loading expresses a mass of loaded goods intended for inland transport or exports. Loading as activity is the beginning of transport process realized by the agreement.

Average static load in railway transport is a ratio of loading in tons and number of loaded train units.

Transported passengers present the total number of transported persons in inland or international transport.

Passenger-kilometres express the value of transport performances in passenger transport. One passenger-kilometre is equal to transport of one person per 1 kilometre distance.

Seat-kilometres express carriage capacity of city transport. This indicator is a product of vehicle driven kilometres and static vehicle capacity rate for every drive individually.

Post office is the independent postal establishment on determined place carrying out receiving and delivery service. Some post offices also provide clearing service.

Dispatched letter items are all kinds of items containing paper documents or tiny objects sent by post offices or by mail boxes.

Deposits of financial services include deposits sent by post cheques (cash or direct), international cheques, deposits for the Post Bank, telecommunication remittances, coupons and others.

Withdrawals of financial services express the number of paid inland and international post cheques, withdrawals for the Post Bank, withdrawals of pensions as well lottery prizes.

Main telephone lines refer to the stations connected by individual or common central office-line or by transmitting devices into the local telephone exchange and they have unambiguous address.

Mobile telephones are stations of public radiotelephone network (NMT – Nordic Mobile Telephone, GSM – Global System of Mobile Communication), which call number is registered in the organizations which operate public radiotelephone network NMT, GSM.

Digital exchanges are devices with electronic structural members, digital changing of signals and automatic controlled connecting processes.

Source

All published data are the result of the statistical surveys of the Statistical Office of the SR, except data on the length of roads, number of motor vehicles and performance data on post and telecommunications, which are taken from sectors informative systems of the Ministry of Transport, Post and Telecommunications of the SR and from the Ministry of Interior of the SR.

More information can be obtained in quarterly publication Results of Quarterly Surveys for Enterprises of Transport, Post and Telecommunications and in Yearbook of Transport, Post and Telecommunications.

V.7 Internal Trade

Methodological notes

The branch of **internal trade** includes entrepreneurial subjects selling goods and own products to final consumers (retail trade) or managing a next sale or manufacturing (wholesale) or eventually providing wholesale on a fee or contract basis, services of public catering or other supplementary services (e. g., transport of purchased consumer goods, repairs of consumer goods, accommodation services, etc.). Hotels and restaurants receipts and since 1999 travel agencies receipts are also included in retail trade receipts.

Retail trade includes entrepreneurial subjects with the following prevailing activity:

- sale, maintenance and repair of motor vehicles and motorcycles; retail trade of automotive fuels,
- retail trade except motor vehicles and motorcycles; repair of consumer goods,
- hotels and restaurants.

Data on total receipts for **retail activity** in the SR consist of data on trade enterprises as well as data on retail activity of non-trade enterprises. Retail trade data classified by economic activities and by size structure of enterprises are surveyed only for trade enterprises.

Wholesale includes subjects with the following activity:

- wholesale and wholesale on fee or contract basis except motor vehicles and motorcycles.

Detailed classification of retail activity and wholesale activity is based on the Branch Classification of Economic Activities.

Data on internal trade are surveyed for incorporated legal persons and for natural persons running business on the base of the Tradesmen Licence or another licence.

Data on retail network and on network of outlet centres of catering are surveyed for incorporated legal persons with 20 and more employees.

Definitions

Receipts in retail trade are the receipts from sales of goods, own products and services at realization prices (i. e. including value added tax) realized mainly in units of retail network (i. e.

in shops, stands, department stores, petrol stations) and as consignment sale, etc. They are divided in two groups: foodstuff goods receipts and non-foodstuff good receipts. Foodstuff good receipts include receipts from selling of foodstuffs in retail and in public catering facilities. Non-foodstuff good receipts include receipts from selling of non-foodstuff goods, services, repairs and works made to order.

Published total **receipts for retail activity** in the SR by structure and by kind of property are given for the receipts for retail activity of trade and non-trade enterprises.

Wholesale receipts are the receipts for the sale of goods from wholesale and purchasing stores to different customers for next sale or for manufacturing. Receipts are expressed at realization prices (including value added tax). They include commission for business procurement.

Retail network consists of shops in which retail activity is carried out. Units of retail network are classified into assortment types by receipts in particular assortment.

Foodstuff shops are those in which the share of foodstuffs in the total turnover is 80 % and more. Non-foodstuff shops sell a general assortment of non-foodstuff goods. General shops sell mainly foodstuffs; from industrial ware mainly that which is often demanded. Department stores are units with a locally concentrated set of selling departments under joint operation. Minimal selling area is set up (e. g., for full-assortment department store it is 1,500 m²). Immobile stands are places of business with a separate place for goods and shop-assistant but not for customers. Petrol stations and garages have no selling area too. Units for sales of fuels and construction materials don't report their selling area if they have no sales room and they sell directly on storage area.

The **network of outlet centres of catering** consists of centres of catering providing catering services, social and entertaining activities as well as supplementary catering services. According to the period of operation the outlet centres are divided into year-round and seasonal ones. A seasonal unit operates less than 9 months during the year.

V.8 Foreign Trade

Methodological notes

Foreign trade includes activities of all entrepreneurial entities, legal and natural persons involved in exports and imports in the form of merchandise. That foreign-trade activity was regulated by the Law of the National Council of the Slovak Republic No 180/1996 Code of Acts – the so called Customs Law and by the Decree of the Ministry of Finance of the Slovak Republic No 167/1997 Code of Acts on contents, form, requirements of customs declaration and on way of keeping customs statistics. Since July 1, 2001 foreign-trade activity is regulated by the Law of the National Council of the Slovak Republic No 238/2001 Code of Acts (Custom Law) and by the Decree of the Ministry of Finance of the Slovak Republic No 251/2001 Code of Acts, laying down certain provision of the Custom Law.

Customs statistics includes information on goods which were imported into the Slovak Republic or stored in the customs warehouse or in free zone and thereafter released into free circulation regime or into regime with economic impact i. e. into the regime of the inward processing in the drawback system or suspension system, into the temporary use regime and into the regime of processing under customs control. In case of exports all goods exported from the Slovak Republic for the purpose of permanent keeping or processing abroad, as well as goods stored in customs warehouse or in free zone, are included.

Concerning imports, the processed information relates to the goods after their release into the proposed regime, usually by inland customs office.

A decisive moment for statistical processing of the data on exported goods is confirmation that the goods crossed the border by border customs office.

Data are collected and processed by Combined Nomenclature, which is given by Customs Tariff. The nomenclature is fully compatible with the nomenclature used by the European Union. Data are also published according to the Standard International Trade Classification, Revision 3, (SITC, Rev. 3), issued by the Statistical Commission of the United Nations in 1996.

In compliance with international methodology of foreign trade data reporting, the data are published exclusively **by country of origin and country of destination**. Values of imports

are expressed in **trade parity** (OP, FOB) and values of exports are given in **franco-price** – Slovak border (FCO, FOB).

Export and import figures are the results of the final statistical processing of foreign trade data for the reference period. The data before the year 1997 are not comparable with those after 1997 in consequence of methodological changes introduced in 1997.

Definitions

Country of origin is the country, where goods were completely produced or obtained, or where goods were substantially transformed.

Country of destination is the country, where goods will be used, consumed or processed, or it is the last known country, where goods will be transported.

Trade parity (OP, FOB) is invoiced price of the goods which is neither increased nor decreased by direct trade costs abroad.

Concerning exports **franco-price** (FCO, FOB) is invoiced price of the goods decreased by direct trade costs abroad.

Direct trade costs abroad are the costs of domestic suppliers or purchasers for delivery or receiving of goods abroad, e. g. costs for transport, insurance and storage of goods.

Economical associations consist of the next countries:

CEFTA (Central European Free Trade Agreement): Bulgaria, Czech Republic, Hungary, Poland, Slovakia, Slovenia, Romania;

EU (European Union): Belgium, Denmark, Finland, France, Greece, Netherlands, Ireland, Luxembourg, Germany, Portugal, Austria, United Kingdom, Spain, Sweden, Italy;

EFTA (European Free Trade Association): Iceland, Liechtenstein, Norway, Switzerland;

OECD (Organization for Economic Co-operation and Development): EU and EFTA member countries, Australia, Czech Republic, Japan, Canada, Republic of Korea, Hungary, Mexico, New Zealand, Poland, Slovakia, United States, Turkey.

Source

Collection of the data on the goods, to which were ensured customs-approved treatment on the basis of necessary documents, their checking and registration in accordance with the legal

regulation mentioned above are done by custom bodies. The Custom Directorate of the Slovak Republic supplies the data to the Statistical Office of the Slovak Republic, which is responsible for foreign trade data processing and publishing.

More detailed information on foreign trade can be obtained in monthly publication Foreign Trade of the Slovak Republic and in the Yearbook of Foreign Trade of the Slovak Republic.

V.9 Real Estate, Renting and Other Community Activities

Methodological notes

Area of **real estate, renting and other community activities** covers those entrepreneurial entities that provide paid services to the population mainly in the field of real property, renting of machines and devices, computer and related services, other business services (such as legal, tax and account consultancy, architectural design and engineering, technical testing and analyses, advertising, labour recruitment, searching and safeguarding services, waste treatment and other various business services), education, waste disposal, recreation, cultural and sport activities and other public and personal services (such as laundry and dry-cleaning, hairstyling and cosmetic care, funeral services, body relaxation activities and other services prevailing of personal character).

Data on real estate, renting and other business activities include data for incorporated legal persons and data for natural persons running business based on the Tradesmen Licence.

Receipts for real estate, renting and other business activities are surveyed including VAT and are divided according to the Branch Classification of Economic Activities.

Till 1998 this area covered also enterprises providing non-market services (for instance some educational and health enterprises) if 50 % and more of their costs were covered by revenues. Since 1999 the activities in health sector have not been surveyed and in educational sector only commercial activities are surveyed.

Till 2000 this subchapter have been published with the title "Selected Market Services".

Definitions

Receipts for real estate, renting and other community activities express the volume of realized services for market services, commercial activities in branch of education and for public, social and personal services.

Source

All published data are the result of the processing in the Statistical Office of the SR.

More information can be obtained in quarterly publication Basic Indicators for Selected Market Services.

V.10 Tourism

Methodological notes

The activities of accommodation facilities, services of travel agencies and foreign tourism are surveyed within the framework of **tourism**.

Foreign visitors accommodated in the tourism facilities are surveyed by the country of residence.

Data on accommodation and tourist services have been obtained from statistical units entered in the Business Register and from natural persons entered in the Tradesmen Register.

Names of the countries are used according to the ISO standard No 3166-93.

Definitions

Accommodation facilities of tourism are those which provide temporary accommodation for visitors regularly or occasionally. They include hotels, boatels, motels, inns with accommodation services, tourist hostels, chalet camps, camping sites, other collective accommodations and accommodation in private. Only complete cottage colonies and camping sites are considered as accommodation facility but individual chalets, cabins or tents of provider are not.

Beds in accommodation facilities of tourism include all beds determined for overnight lodging of visitors including occasional beds. The beds intended for the owner and for staff of accommodation facility are excluded.

Places on free area are basic camp units for tents, tent and passenger car, caravan, motor caravan multiplied by 4. Four people can be accommodated per one camp unit.

A visitor in accommodation facility of tourism is a person (except staff and owner) using services of temporary accommodation facility regardless of country of permanent residence. Children are also included in the number of visitors. The visitor uses accommodation services for the reason of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa and convalescent centres, visit of friends or relatives, participation in

church events, etc.. There is also included accommodation of children in out-door schooling and in summer and winter holiday camps for children. Domestic and foreign employees working in Slovakia who use the accommodation facility temporarily as a hostel are not considered to be visitors. The period of temporary accommodation should not exceed 1 year.

Receipts for accommodation services include the receipts with value added tax obtained from overnight stays of visitors (domestic and foreign), receipts from setting of the tent, motor vehicle or caravan, connecting to electric network, etc., (regardless of the way of the payments for accommodation). Receipts from services relating to accommodation (e. g. washing and cleaning of laundry, using of bathroom, etc.) are also included. Receipts from services of personal character e. g. cosmetics, hairdresser's, manicure and chiropody services are excluded.

Foreign visitor accommodated in an accommodation facility is a person who visits the country and is not the resident of the country. Children are also included in the number of visitors. Foreign visitor uses accommodation services for the reason of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa and convalescent centres, visit of friends or relatives, participation in church events, etc. Exceptions are those people who are coming to do a job, to prepare themselves for a profession (a long-term study) or to become a resident of the country. Members of diplomatic corps and armed forces being on duty in the country are also excluded.

Participant in the active tourism is foreign visitor using services of tourism during travelling in the Slovak Republic and he is not the resident of the Slovak Republic.

Participant in the passive tourism is the Slovak citizen using services of tourism during travelling abroad.

Participant in the active or passive foreign tourism is a person travelling for the reason of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa and convalescent centres, visit of friends or relatives, participation in church events, etc. Exceptions are those people who are coming to do a job, to prepare themselves for a profession (a long-term study) or to become a resident of the country. Members of diplomatic corps and armed forces being on duty in the country are also excluded. Duration of a temporary stay of participant in the active or passive foreign tourism must not be longer than 1 year.

Arrivals of foreign visitors into the SR include numbers of all arrivals of foreign visitors who entered the Slovak Republic for any reason.

Travels abroad of the Slovak citizens include numbers of all travels abroad of the Slovak citizens for any reason.

Source

All published data are the result of the processing in the Statistical Office of the SR excluding data on arrivals of foreign visitors to Slovakia and on travel abroad of Slovak citizens by the sections of borders and airports which are processed from the statistical information received from the border crossing points and airports of the Slovak Republic and granted by the Department of Border and Alien Police of the Presidium of Police of the SR.

More information can be obtained from quarterly publications Basic Indicators of Tourism of the SR for Accommodation Facilities; Foreign Tourism and in annual publication Tourism Organized by Travel Agencies of the SR.

VI.1 Income, Expenditure and Consumption of Households

Methodological notes

Structure of income and expenditure of households is surveyed within the framework of statistics on household budget realized by the Statistical Office of the SR regularly every year. It is a sample survey where a purpose-made quota selection is used in order to create the sample. Quota criteria are the following:

- region (8 groups);
- social group of households which is assigned by the social status of the head of household (5 groups);
- net money income per capita and month (2 groups);
- number of dependent children in the households where the head is an economically active person (4 groups), number of members in pensioner's households (2 groups) and sex in one-member pensioner's households.

Frequency of individual groups of households by the first two criteria was fixed on the basis of the last Census results (1991). Frequency by the last two characteristics was fixed according to the results of sample survey on money income of households (Microcensus 1997). In 2001 reporting network was created by 1 625 individual households.

Reporting unit according to the family budget surveys is together managing household, i. e. group of people who permanently occupy together one dwelling and reimburse together the household expenditure (food, current necessary household expenditure, maintenance of the dwelling, etc.). Member of household can also be a person who is not relative with other members of household but he permanently shares one dwelling and all household expenditures with them. Household willingly supplies information about all its income and expenditure of all of households members.

Structure of expenditure is given by the Classification of Individual Consumption by Purpose – COICOP from year 1997.

Gross and net money income and expenditure on households in total are estimates for average household recalculated from the values covering households of employees, i. e. persons having the status of an employee (except for agriculture), farmers (manual working

members of farming co-operatives including self-employed farmers), households of pensioners without an economically active member while one of the household members can work one month per year at most as well as self-employers (except for agriculture) by using the weighted arithmetical mean.

In 1999 the methodology for calculation of gross and net money income and expenditure was changed. Withdrawn savings and deposits are not included in the indicators.

Data on **consumption of food and alcoholic beverages per capita** are calculated by using the balance method. Consumption is computed per mid-year population. Main data inputs used for the calculation are data on domestic production, imports, exports, initial and final stocks. Calculation of individual data on consumption of food is based on statistical information of the Statistical Office of the SR and the Ministry of Agriculture of the SR as well as information from some food industry unions.

Daily consumption of energy and the most important nutritive ration per 1 capita are calculated on the base of food consumption data, which were calculated by balance method after excluding consumption in food industry for further processing and from the nutritive values of food given in the tables. The result is expressed in gross terms, i. e. including losses (as purchased).

Meat and meat products consumption is given in terms of carcass weight including entrails and consists of beef, pork, veal, poultry, mutton, horse, goat, rabbit and venison meat.

Fats total are expressed in terms of net fat.

Vegetable, vegetable products, fruits and fruits products are expressed in terms of fresh product.

Equipment of households (dwelling) by durables were surveyed in the housing and population census. Indicator expresses number of households, in which at least one given durables is present.

Definition

Gross money income of households represents the total sum of money received by any member of a household. It is the sum of the money income from employment (from wages and compensations for work activity in non-agricultural and agricultural branches from employer, resp. co-operative), financial amounts assigned by self-employer from his/her business

income for the needs of the household, social income, financial givings, compensations from insurance companies, gains from lotteries, withdrawals of loans and the like. Gross money income data do not include withdrawals of own savings.

Income from the property of households is created by the financial amounts from bond, shares and coupon dividends, from sales of farming products, from real-estate lease, etc.

Net money income of households consists of:

- net earnings, i. e. income from employment without income tax and compulsory contributions to the Social Insurance Agency, health insurance companies and to the National Labour Office;
- part of income from private business running used by an entrepreneur for household providing;
- social income, i. e. old-age pension security benefits, sickness insurance benefits, state social benefits, social aid benefits and unemployment allowance;
- other income, i. e. income from property, income from institutions and income from private persons, income from sales of farming products and income from abroad and withdrawn new loans.

The income does not include neither the balance of withdrawn loans and paid-up loans (loans in total are included in the other income) nor the balance of withdrawn savings and deposits (withdrawn savings in total are surveyed individually).

Gross money expenditure of households is the sum of financial amounts spent on purchase of goods and services including all types of insurance (consumption expenditure) and of transfer of all payments (other expenditure) including income tax and loans payments. The consumption expenditure does not contain under the item “miscellaneous goods and services” expenditure of households on compulsory personal insurance, i. e. contributions of health and sickness insurance and old-age pension security and contributions of insurance in unemployment (they are involved in the item “other expenditure”) and the item “other expenditure” does not include the savings (they are surveyed in the individual item “deposits”).

Net money expenditure of households is recalculated as the sum of expenditure on consumer goods and services and other net expenditure. Income tax, compulsory contributions to Social Insurance Agency, health insurance companies and to the National Labour Office are excluded. The indicator does not cover balance of paid-up and withdrawn

loans (the sum of loans payments is involved in other expenditures) neither balance of deposits and withdrawn savings (deposits in total are surveyed individually).

The average consumption of selected kind of food and alcoholic beverages is total amount of the commodity available in the country as human food during given year per capita. The consumption of surveyed kinds of food also involves the consumption in food industry for further processing (meat for production of smoked products, sugar for confectionery production, e. g.).

Source

Family budgets data are the result of the processing realized by the Statistical Office of the SR. More information is available in the publications Structure, Income and Expenditure of Private Households and Income, Expenditure and Consumption of Households.

Food consumption and its nutritive evaluation were processed by the Statistical Office of the SR. Data on nutritive value of consumption for 1999 were worked out in collaboration with the Research Food Institute in Bratislava. Next information can be found in annual publications Food Consumption.

Data on equipment of households are the results of the processing of the SO SR from housing and population census as of May 26, 2001. Basic information on households equipment by durables were published for the Slovak Republic, regions and districts in the publication Housing and Population Census 2001 Basic Data.

VI.2 Education

Methodological notes

According to the Law on the System of **Basic and Secondary Schools** No 29/1984 Code (Law on Education) in the wording of later regulation, the system of basic and secondary schools consists of basic school, basic school of arts, vocational school, vocational secondary school, grammar school, specialized secondary school and special schools. **Educational facilities** (Law No 279/1993 on the Educational Facilities) as well as **higher education institutions** (Law No 172/1990 in the last wording) are also the part of the educational system.

The school years presented in the tables are indicated by the beginning of the school year, e. g. the year 2001 refers to the school year 2001/2002.

Data on church and private schools are included in the tables related to the individual types of schools and are published separately at the end of the chapter.

Data concerning secondary schools and higher education institutions do not cover the schools of the Ministry of Defence of the SR and Ministry of Interior of the SR. The figures on higher education include civil students of military universities.

Schools where upbringing and education are carried out in the language of the minority in addition to the Slovak language are reported as the schools with combined teaching language which means that in such schools there are classes with the Slovak teaching language and classes with the minority teaching language established.

Internal teachers including school directors are included in the number of teachers except vocational secondary schools where are included only internal teachers.

Shift-lessons relate to the lessons of pupils and classes who have not separate classroom and therefore the lessons are performed also in the second shift.

Definitions

Special schools provide upbringing and education through the pedagogical and educational method for mentally or physically handicapped pupils, pupils with impaired senses

or speech, pupils with more disabilities, pupils with trouble behaviour as well as ill and weak pupils in health facilities. Data on special kindergartens, special basic schools, schools for handicapped children, auxiliary and special secondary schools are included in the data for special schools.

Source

Data source is created from the processing of sector survey realized by the Institute of Information and Prognoses of Education, excluding the financial indicators which are the result of processing in the Statistical Office of the SR, the Institute of Information and Prognoses of Education and the Ministry of Finance of the SR.

More information can be obtained in annual publications Basic Data on Schools and School Facilities in the SR and Selected Indicators of Non-market Services or from the Institute of Information and Prognoses of Education.

VI.3 Health

Methodological notes

Data on **health care** are summarily published for the branches of the Ministry of Health of the SR, the Ministry of Defence of the SR, the Ministry of Interior of the SR, the Ministry of Justice of the SR, the Railway Health Service excluding the data on bed fund in hospitals, which are presented only for the Ministry of Health of the SR.

The group of health facilities – hospitals includes I., II. and III. types hospitals, children hospitals of II. type, psychiatric hospitals, children psychiatric hospitals, hospitals with policlinics of I., II. and III. type, teaching faculty hospitals, teaching faculty hospitals with policlinics and children teaching faculty hospitals with policlinics. Special therapeutic institutes cover tuberculosis and respiratory diseases sanatoriums, rehabilitation, oncology, cardiology, endocrinology and rheumatology institutes, institutes of preventive and clinical medicine, institutes of nourishment, geriatric and chronic illness institutes, institutes in branch of gynaecology and obstetrics, Centre for Treatment of Drug Additions, Centres for Treatment of Drug Additions for Children, Geriatric Centre, special therapeutic institutes for children and children convalescent centres.

Data on **drugs consumption** are obtained from individual pharmacies. Drugs consumption is surveyed by drugs categories, producers, producer countries and it is given in number of consumed packs and financial value.

Expenditures paid by health insurance companies are processed by statistical survey in health insurance companies. More information is given in chapter II. Finance. Health expenditures paid by citizenship are obtained by the sample survey in households.

Data on **infectious diseases** are processed according to the compulsory announcements. There are only newly notified cases presented. Newly notified cases of tuberculosis are surveyed including relapses.

Average number of persons covered by sickness insurance comprises the insured employees, members of manufacturing and farming co-operatives, self-employed persons – artists and others (scientific workers, journalists and the like). Persons on maternity leave and additional maternity leave, persons on compulsory military service and prisoners placed in

penitentiary institutions are not included in the average number of persons covered by sickness insurance.

Up to 1999 the sample of 20 per cent of all terminated cases of disability to work was included in the statistical processing of the terminated cases of disability to work. Since 2000 data are processed by exhaustive statistical survey.

Definitions

Physician's post is an indicator of rate of providing health services in a particular branch and a particular area. It is determined by the number of contract duty hours of physicians where 42,5 working hours per week or 36 working hours per week in dangerous work-places, respectively, are considered as one physicians' post according to the particular rules. Partial or additional duties are converted to the whole physicians' posts.

Public pharmacy provides pharmacy care for public including of individually prepared drugs. In the framework of pharmacy care a pharmacy provides drugs and prepares, checks, stores, gets out and sells drugs, gives special information about drugs and consultation on determination and monitoring of therapeutic method.

Average price of drug per pack is defined as a ratio of value and number of packs of consumed drugs. The value of consumed drugs is expressed in Slovak crowns and for its calculation is used maximal price determined by the Ministry of Finance of the SR in the period of drug consumption.

Expenditures paid by health insurance companies are payments of health insurance companies for health care provided to their insured in accordance with the valid Therapeutic Regulation.

Expenditures paid by citizenship include the expenditures of population for health and pharmaceutical products, therapeutic devices and for out-patients and hospitals health services.

Average duration of disability to work is the number of days of disability to work per one case.

Average percentage of disability to work per year is calculated as a ratio of calendar days of disability to work due to illness and injury and average number of employees covered by sickness insurance, multiplied by the number of calendar days of the year.

Source

Data are obtained from processing of sector statistical surveys of the Ministry of Health of the SR and from the processing of the State Institute for Control of Drugs (drugs consumption). There are also used the administrative sources of following organizations: Ministry of Defence of the SR, Ministry of Interior of the SR, Ministry of Justice of the SR, Ministry of Health of the SR, Railway Health Service and State Health Institute (infectious diseases).

Figures on disability to work due to disease and injury and figures on expenditure in health sphere paid by citizens and health insurance companies are taken from the processing of the Statistical Office of the SR. Data on number of physicians (natural persons) were taken from the Physicians Register kept at the Institute of Health Information and Statistics.

More information can be found in the half-year publication Disability to Work Due to Disease and Injury and in the following annual publications Selected Indicators on Health Care; Selected Indicators on Health Insurance Companies, the Social Insurance Agency and the National Labour Office and Disability to Work Due to Disease and Injury or in the ministries and other institutes mentioned above.

VI.4 Social Security

Methodological notes

Social security consists of the pension security, sickness insurance, state social benefits and social assistance.

Pension security is comprised of the old-age security, security in invalidity and in case of missing breadwinner. The pension security covers mainly employees, members of farming co-operatives, members of manufacturing co-operatives and self-employers.

Pension security includes an old-age pensions (full or shared), invalidity pensions (full or partial), widow's, widower's, orphan's pensions, long-term service pensions and pensions declared before January 1, 1957. Data on average level of pensions comprise also reduced pensions received in parallel with widow's pension. Since 1994 wife's pensions, social pensions, increase of pension in case of disability and increase of pension in case of sole source of income are state benefits refunded by government.

Benefits of **sickness insurance** include four systematic benefits: sickness insurance benefits, family member attendance allowance, maternity financial allowance and equalizing pregnancy and maternity allowance. In full extent these benefits are granted to employees and members of farming and manufacturing co-operatives. Self-employers are not entitled to get a family member attendance allowance, equalizing pregnancy and maternity allowance. Unemployed are not entitled to get a sickness insurance benefits.

Since January 1, 1995 **state social benefits** such as children and parental allowance and former social security for families of those on service in armed forces (until Dec. 31, 1994 shown separately) have been excluded from sickness insurance. The benefits of former social security for families of those on service in armed forces consist of the subsistence contribution, housing contribution and compensation for earnings during serving in armed forces and during civilian service. Non-systematic sickness insurance benefits refunded by government include health resonance care including transport.

Since January 1, 1999 funeral allowance and child-birth allowance have been transformed from sickness insurance benefits refunded by government to state social benefits and foster parent remuneration have been transformed from benefits of social care to state social

benefits as well. Since 2000 new benefit “contribution for accommodation” is granted in the framework of state social benefits.

There have been changes in the branch of the social care resulting from the transformation of social security. According to the Law No 195/1998 Code of Acts on Social Assistance the system change occurs in the branch of benefits granting to persons in destitution. Allocated benefits of social care addressed to different groups of persons were transformed to the only benefit of social assistance. Since 1999 expenditures for social assistance are classified according to the Budgetary Classification valid for particular year.

Services and benefits of social assistance are given to the persons for reducing and getting over material or social destitution with their active participation.

Since 1999 the increasing of nursing service employees is caused by new methodology of employees surveying in accordance with legal status change. According to the Law No 195/1998 Code of Acts on Social Assistance the activity of voluntary workers of nursing service (presented in persons) was cancelled. Nursing service is only realized by employees with labour relation or persons working upon contract according to the Labour Code. The number of employees shown in the table is recalculated on full-time job and voluntary nurses are not given.

Institutional care is provided in the facilities of social services according to the Law No 195/1998 on Social Assistance. In 1999 the indicator “Facilities for youth” includes also the data on children’s homes.

Definitions

Old-age pension is the fundamental benefit of pension security. Citizens qualify for an old-age pension after a minimum 25 years of employment and reaching a determined age limit (depending on job category: 55 – 60 years for men, for women 53 – 57 years also on the number of children raised).

Invalidity pension is allocated for citizen who is suffering from a long-term adverse state of health and meets the conditions for allocation of invalidity pension. In case of invalidity caused by work injury, the condition for the required number of years in employment is always considered fulfilled.

Orphan pension is allocated to the dependent children due to death of a parent or adoptive

parent. Full orphan benefit is allocated to children whose parents (or adoptive parents) both died. These benefits do not depend on employment duration.

Widow's pension is allocated as the partial replacement of deceased husband's income.

Widower's pension is allocated as the partial replacement of deceased wife's income during care for at least one dependent child.

Wife's pension is the pension security benefit refunded by government available to married women who are fully disabled or have reached 65 years of age but who do not qualify for benefits based on their own pension schemes and earn no income.

Social pension is allocated to persons without subsistence who do not qualify for pension.

Sickness benefits temporarily compensate person for loss of income due to sickness or accident.

Family member attendance allowance is claimed when caring for a sick child under the age of 10 or caring for another sick member of the family when the provision of such care by another person is necessary.

Maternity financial allowance compensates woman for loss of income during 28 weeks in last period of pregnancy and after delivery. It is paid 37 week in case of an employee who is single or who has given to two or more children.

Equalizing pregnancy and maternity allowance is paid during pregnancy and until the end of the nine month from delivery to a woman who is transferred to a different job because her original work was dangerous or threatened her pregnancy or maternity.

Children's allowance is given to breadwinner of dependent children in different amount by the children age and family income according to the law.

Parental allowance is repeated benefit entitled to the parent or person for permanent personal and proper care of at least one child up to the age of 3 years or up to the age of 7 years for child recognised as suffering from long-term severe health impairment.

Child-birth allowance is a single benefit given to the mother who gave birth to the child or is given to the father of the child or to the another person meeting the conditions according to the law.

Foster parent remuneration is a single or repeated benefits paid to the children in fosterage.

Funeral allowance is a single benefit given as the partial replacement of expenditure for the funeral of a person under the social security.

Contribution for accommodation is state social benefit by which government contributes for replacement of expenditures linked to dwelling or family house using.

Health resonance is a benefit given for the persons under the social security and for their family members, whose health state gives reason for its allocation.

Increase of pension in case of disability is the allowance for replacement of increased costs relating to the need of serving and taking care of him/her by another person.

Increase of pensions in case of sole source of income is the state benefit of pension security granted in case that, old-age, invalidity, widow's, widower's or full orphan's pension is the only income source and do not reached 1,1 multiple of statutory minimum.

Benefit of social assistance is a single or repeated benefit allocated to the person in material destitution to provide basic living condition of this person.

Source

Published data on pension security benefits, sickness insurance and state social benefits are taken from the informative system of the Social Insurance Company and from the sector questionnaires of the Ministry of Labour, Social Affairs and Family of the SR.

Published data on social assistance and facilities of social services are the results of the processing of the Statistical Office of the SR.

More information is given in annual publications Selected Indicators of Social Welfare and Social Care Facilities or in mentioned ministry and in the Social Insurance Company.

Data source about refugees in the Slovak Republic is the information system of the Migration Office of the Ministry of Interior of the SR.

VI.5 Culture and Religion

Methodological notes

Statistical data presented in the chapter refer to the network and activity of the state, municipal and private **cultural institutions**.

All kinds of professional theatres of the Ministry of Culture of the SR (including theatres for the youth and puppet ones) in 1997 – 2000 except the Theatre of the Academy of Music and Dramatic Arts.

In 1997 data for galleries in total included only state galleries and since 1998 there are included state, municipal and non-state galleries.

The term “Musical ensembles” contains data on state musical ensembles and state ensembles of songs and dances.

The indicators Radio broadcasting and TV broadcasting include the operators provided by law, i. e. public legal broadcasters (nation-wide broadcasting) and operators granted a licence i. e. private broadcasters, whose programmes are transmitted by terrestrial channels.

Television broadcasting: The title “nation-wide broadcasting” comprises the broadcasting covering the whole territory of the SR and the title “local broadcasting” is the broadcasting for the territory smaller than the Slovak Republic.

The indicator “number of titles” includes local publications if they are different from main publications, parts of newspapers sold separately, special publications, morning and evening papers with own name and registration, different language versions of the same periodical. There are not included local issued papers of the same papers, if they are not different from each other and parts of papers, if they are not sold separately.

The indicator “circulation” also includes non-sold pieces.

The title “audio-visual works” is new name for previous title “film production”.

According to the housing and population census the religiosity means an activity of population in some church or a relation to some church. Religiosity of children under 15 was given by their parent decision.

Figures on religion show selected indicators on five most frequent churches obtained by questionnaire method.

Definitions

Broadcasted program presents all programs broadcasted through the own independent networks (including national broadcasting), local or outside production.

General news cover regularly daily news and commentaries to main events, including sports news.

Loans to users include the loans of all library units, i. e. books, periodicals, other documents and information sources to readers, i. e. without inter-library loan service.

Periodical publication is periodical press or another periodical issued at least two times per year with the same title, periodicity indication and standard layout for the publication.

Branch office of the museum refers to the detached parts of museum (including monuments belonging to museum), which are out-of the museum residence and create administrative entity with the museum.

Exposition is the whole installation placed in one building and opened for public.

Membership in civil associations, professional organizations, trade unions etc. is given in accordance with their rules.

Source

Source of data on culture is annual statistical survey in several sectors. The Ministry of Culture of the SR obtains data for theatres, musical ensembles, museums, galleries, audio-visual works, libraries (except university libraries), radio and TV broadcasting, observatories, planetariums, astronomic cabinets, periodical press and churches. Zoological gardens data are reported by the Ministry of Environment of the SR. The Ministry of Education provides data on university libraries.

Data on membership in civil associations were taken from central bodies of civil associations by questionnaire method.

More information can be obtained in annual publication Selected Indicators on Culture or in mentioned ministries.

VI.6 Physical Culture

Methodological notes

Physical culture is both – an organized and non-organized individual, collective, club and other activity connected with physical training, sport, hiking and active recreation activity of people. This type of activity is carried out within the framework of the Slovak Association of Physical Culture and other civic associations.

Number of members of individual unions of the Association of Technical and Sporting Activities of the SR is given only for years, when they were its members.

Definition

Juniors include sportsmen who have not reached the age in which they can attend races for adults category. Various sports have different age for the category of adults. In gymnastics it is the age of 16, in different sports it is varying up to 23 year of the age.

Source

Data are obtained from the statistical surveys of the Institute of Information and Prognoses of Education and administrative data taken from the Association of Physical Training Unions and Clubs of the SR as well as from the Association of Technical and Sporting Activities of the SR. Detailed data can be granted by organizations mentioned above.

VII.1 Crime-rate and Justice

Methodological notes

Data on **criminality** are surveyed in the framework of the Registration Statistical System of Criminality. There are registered announcements on a suspicion from commission of crimes, data on crimes and data on known perpetrators of criminal acts. The statistical tables also contain the data registered by the Railway Police of the SR, the Office of Military Police of the General Staff of the Army of the Slovak Republic and the General Directorate of Union for Prison and Justice Guards of the SR. Data on cases settled by courts and results of lawcourts proceedings are taken from the Ministry of Justice of the SR.

Definitions

Criminal offence is an act of a person or group of persons that intentionally or unconsciously offend against a law, rule or agreement.

Homicide is a criminal offence by which certain person is assassinated by another person.

Robbery is a criminal offence of perpetrator when he takes possession of the things owned by another person under the menace of immediate violence.

Battery is a criminal offence of perpetrator when he causes damage the health to another person with consequence of disability to work of this person in duration at least 7 days.

Violence criminality includes criminal offences: homicide, robbery, battery, blackmail, common coerce, burglary etc.

Moral criminality includes criminal offences relating to the laws on morality breaking: rape, sexual abuse, imperilling of morality, procuring, etc.

Economic criminality is specific kind of criminality causing economic damages to the country, organizations and to natural persons by breaking the laws, rules and habits of economic relations.

Cases mean an indication of cases registered in particular register and being on the agenda at the courts. One case can involve more persons.

Criminal cases are cases being on the agenda at the courts on the basis of suit ceded to

the courts by the prosecutor's office, within which the decisions on guilt, punishment, protective measures and compensation of damages caused by criminal activity are made.

Fill is total number of criminal cases that entered the courts during the calendar year, eventually cases registered in particular register as a consequence of application of revisions. In civil cases and in care for minor children, fill represents the number of proposals recommended to the court to be dealt with and the courts register them into a particular register.

Defendant is a person against whom a legal action was brought to the court.

Settled is total number of cases completed in the course of the calendar year by legal decision on conviction, acquittal, abolition of the criminal prosecution or conveying to another body.

Unsettled is number of cases that were not completed legally for some reason in the course of the calendar year. These data are always referring to December 31, of given year.

The main part of **civil cases** consists of cases regulated by the Civil Code, Law on Family, Law on Land and Labour Code.

Sued person is a person sued for committing particular criminal offence, if particular bodies started investigation. Accompanying the term "sued for committing a serious criminal offence" there is used the term "detaining" or "detention service", which is directed in written by a prosecutor or a judge.

Convict is a person on whom a sentence was passed that came into force.

Sentence without suspension is sentence to imprisonment in penitentiary institutions administered by the Ministry of Justice of the SR.

Suspended sentence is sentence to imprisonment that is suspended for 1 to 5 year's probation.

Banned profession is forbidden to operate in certain occupations, professions, functions or activities. The duration of this sentence is limited to the period of 1 to 10 years. The sentence can be passed on convicted juveniles only in case if it does not prevent them from the preparation for their future profession.

Habitual offender is person on whom the sentence was passed by the court taking into account his/her previous conviction as an exacerbating circumstance.

In addition to the duration of sentence to imprisonment without suspension according to the seriousness of the committed crime, the court imposes also the **reformatory and**

reclamation group to convicts while serving their sentences. It is executed by the rule that the higher is the rank of the reformatory and reclamation group the smaller is the extent of rights of convicts and the larger is the extent of limitations.

Source

Statistical data source on criminality are administrative data of the Ministry of Interior of the SR. Data on justice are taken from basic materials of the Ministry of Justice of the SR.

More information is given in annual publication Selected Indicators on Criminality, Road Traffic Accidents and Fires or in above mentioned ministries.

VII.2 Accidents and Fires

Definitions

Killed persons are persons who died in the place of accident or in the place of fire, when being transported to hospital or by 24 hours after the accident.

Material loss is level of arose loss set by the police on the basis of the values indicated by parties involved in the accident.

Direct material loss is sum of losses calculated from residual value of tangible fixed assets, materials and other means destroyed by the fire, estimated by firemen.

Rescued valuables are sum of values of tangible fixed assets and other valuables rescued from fire.

Source

Source of statistical data on fires is the Ministry of Interior of the SR, the Presidium of Fire and Rescue Corps and the Institute of Fire Technics and Expertises.

The annual publication Selected Indicators on Criminality, Road Traffic Accidents and Fires or mentioned ministry can provide you more information.

VIII.1 Regions

Methodological notes

According to the Law of the National Council of the SR No 221/1996 Code of Acts on Territorial and Administrative Division of the SR, which came into force on July 24, 1996, regions broken up into districts have become the administrative units of the SR. The territory of the SR has been administratively divided into 8 regions and 79 districts.

This subchapter contains selected indicators **by regions** of the Slovak Republic.

Broader methodological description of indicators is given in the respective subchapters. This part only includes differences and deviations between processing methods or sets of statistical units and data or results, respectively, for the whole Slovak Republic.

The methodology of compilation of **regional gross domestic product** and indicators from regional accounts is based on the European System of National and Regional Accounts in the Community (ESA 1995). The base for estimates of regional gross domestic product are national accounts, which have been gradually harmonized with ESA 95 methodology since 1996. Presented results for 1998 and 1999 are compiled from annual national accounts and for year 2000 from quarterly national accounts. Data are not consistent with the results published in the previous period.

Gross domestic product at market prices is the final result from production activity of resident production units, which was created during current accounting period. **Regional gross domestic product** is calculated as the sum of values added for branches in the region and taxes on products reduced by subsidies on products.

Compilation of regional indicator **gross value added** by branches is based on statistical and administrative data sources. Main sources of statistical data are surveyed on the basis of specific annual and quarterly reports for a set of organizations with 1 and more employees registered in the Business Register and for a set of non-incorporated natural persons including expert statistical estimates for production on own use and for imputed production of dwelling services. Administrative data sources are the Ministry of Finance of the SR (accounting annual statements, declarations of taxes, income and expenditures of state budget and state closing summary account), the National Bank of Slovakia and partially other ministries.

Presented alphabetic codes correspond to NACE categories. Categories G – O in regional division also contain FISIM.

Purchasing Power Standard is calculated on the basis of prices and volumes of goods sale, which are intercomparable and representative for the countries included into comparison. Purchasing Power Standard eliminates effects of different price level between countries. The base for calculation of purchasing power parity is the European Comparative Programme. National statistical offices including the SO SR take part in this programme.

Regional gross domestic product per capita is the share of two indicators – regional gross domestic product (where is used as compilation criterium the place of work) and average population permanently residing in given region (based on the residence principle).

Marriages are classified in respect of the territory according to the last domicile of the bridegroom. **Divorces** are classified in respect of the territory according to the last common domicile of the married couple. In case that they did not live together it is classified according to the domicile of the divorce proposer. Population balance for year 2001 is compiled on the basis of results of the Housing and Population Census as of May 26, 2001.

Employment is surveyed by territorial (establishment) method. In consequence of this, published data are partially different from data for the SR in total, which are surveyed by enterprises method.

Data on emissions of basic pollutants only refer to stationary pollution sources.

Receipts from own performances and goods and average number of employees in industry are processed for industry in total including small enterprises and estimates for tradesmen.

Data of the indicator “**started dwellings**” show the number of building permissions issued. The indicator “**completed dwellings**” shows the number of dwellings that were approved for use. Number of **dwellings under construction** is the difference between these two indicators regardless of viewpoint of time. Number of rooms in completed dwellings is given on the basis of approvals.

Data on **criminality** refer to the criminal offences ascertained by the police corps, they do not include the offences ascertained by the railway police, customs administration, prison and court guard and military police. All criminal offences are included only in summary data for the Slovak Republic in the subchapter Crime-rate and Justice (VII.1).

Definitions

Indicators definitions are given in the respective subchapters of this publication.

Source

This subchapter was prepared mainly from the indicators processed in the territorial division from the sources of the Statistical Office of the SR.

Data source on purchasing power standard exchange rates and on average level of GDP per capita in the European Union is the Statistical Office of the European Union (Eurostat). Emissions of basic pollutants are taken from the Slovak Hydrometeorological Institute, land area is taken from the Office of Geodesy, Cartography and Cadastre of the SR and data on criminality, accidents and fires from the Ministry of Interior of the SR.

More information by regions can be found in quarterly publication Selected Data on Regions, in annual publication Regional Comparisons and from the Statistical Yearbook of Regions of the SR 1996 – 2000.

VIII.2 Towns

Methodological notes

This subchapter contains selected data on **towns of the Slovak Republic**.

A municipality is declared a town by the National Council of the SR by a governmental proposal according to section 22, subsection 1 of Law No 369/90 Code on the Municipal Constitution. As of December 31, 2001, there are 138 towns in the Slovak Republic. Krásno nad Kysucou and Šaštín-Stráže were declared towns by the decrees of the National Council of the SR No 245/2001 and No 246/2001 Code of Acts with effect from September 1, 2001.

The reported **population** of some towns does not accord with the total increase/decrease of it. The differences result from territorial changes, which are not included in the total increase/decrease of the population.

Population balance for year 2001 is compiled on the basis of results of the Housing and Population Census as of May 26, 2001.

Data on **geographic conditions and on the level of the civic and technical infrastructure** of the towns are obtained in the framework of statistical subsystem of Towns and Municipal Statistics. Data are surveyed for all municipalities and towns of the Slovak Republic. Data are updated as of December 31, data on pre-primary facilities as of September 30, data on basic and secondary schools as of September 15, and data on higher education institutions as of October, 31.

Reporting units are municipalities (in Bratislava and Košice – town parts), owners or administrators of water, sewage and gas supply systems.

Changes in area of some towns occurred due to shifts of parts of the local areas caused by the territorial changes.

Definitions

Definitions of indicators are given in the respective subchapters of this publication.

Source

Published data for demography are the result of statistical surveys, other data are drawn up from database of Towns and Municipal Statistics, which obtains data from a special statistical questionnaire and from out-sector databases. Data on houses and dwellings are the results of the Housing and Population Census as of May 26, 2001. These sources provide more information for all municipalities of the Slovak Republic.

IX.1 International Surveys

Methodological notes

The data are either taken from the sources below or are calculated by the Statistical Office of the Slovak Republic from the data reported in the sources. Some data on the Slovak Republic have been obtained from the sources of the Statistical Office of the Slovak Republic. They are processed by the national methodology, therefore the data are not fully comparable with data of other countries. The data published in some international statistical yearbooks are recalculated according to the methodology of a given international organization and therefore they are not always in compliance with the data published for the Slovak Republic by the Statistical Office of the Slovak Republic. Source of data is mentioned below the tables.

Names of countries are given in abbreviated widely used forms that are not always in compliance with official full names of the countries.

Data for 2000 are, in most cases, preliminary.

Unemployment rate is present by the labour force sample survey (methodology of the International Labour Organization, ILO).

The Central European Free Trade Agreement (CEFTA) was signed on 21st December 1992 in Krakow. The original signatories of the Agreement was the Czech Republic, Hungary, Poland and the Slovak Republic. The following countries became members through accession: Slovenia (January 1, 1996), Romania (July 1, 1997), Bulgaria (January 1, 1999).

Poznámky k Európe:

- 1) európska časť Turecka je zahrnutá do Ázie
- 2) rok 2000
- 3) bez Faerských ostrovov a Grónska
- 4) bez zámorských departmentov, a to Francúzska Guyana, Guadeloupe, Martinique a Réunion
- 5) vrátane ostrovov Gozo a Comino
- 6) vrátane Azorských ostrovov a ostrova Madeira
- 7) bez Britských Normanských ostrovov a Isle of Man
- 8) s Baleármi a Kanárskymi ostrovmi a Alhucemas, Ceuta, Chafarinas, Melilla a Penon de Vélez de la Gomera

Poznámky k Ázii:

- 1) európska časť Turecka je zahrnutá do Ázie
- 2) rok 2000
- 3) bez Honkongu a Macao
- 4) vrátane časti Kašmíru-Džammu pod správou Indie, ktorého konečné postavenie nebolo ešte určené
- 5) vrátane Východného Timoru
- 6) vrátane údajov za východný Jeruzalem a izraelských usadlíkov v určitých územiach okupovaných Izraelom od júna 1967
- 7) zahŕňa Hokkaido, Honshu, Shikoku, Kyushu
- 8) bez údajov za jordánske územie okupované Izraelom od júna 1967
- 9) bez údajov za Kašmír-Džammu, ktorého konečné postavenie nebolo ešte určené, Junagardh, Manavadar, Gilgit a Baltistan
- 10) zahŕňa 7 šejkátoŕov Abu Dhabi, Dubai, Sharjah, Ajman, Umm al Qaiwain, Ras al Khaimah a Fujairah a územie, ktoré patrí Riyadhu po úprave hraníc v októbri 1955

Poznámky k Afrike:

- 1) rok 2000
- 2) vrátane enklávy Cabinda
- 3) bez údajov za Mayotte
- 4) bez Rodriguees a ostatných malých ostrovov
- 5) zahŕňa Bioko a Rio Muni

Poznámky k Amerike:

- 1) Havai, štát USA je zahrnutý do Ameriky
- 2) rok 2000
- 3) bez indianskeho obyvateľstva žijúceho v džungli
- 4) bez kočovných indianskych kmeňov
- 5) vrátane Carriacou a iných závislých území v Grenadských ostrovoch
- 6) vrátane Bequia a ostatných Grenadských ostrovov

Poznámky k Oceánii a Svetu:

- 1) rok 2000
- 2) vrátane Vianočného ostrova a ostrovov Fanning, Ocean, Washington
- 3) vrátane Campbellových a Kermadecových ostrovov a neobývaných ostrovov Antipodes, Auckland, Bounty, Snares, Solander, Tree Kings
- 4) zahŕňa východnú časť Novej Guiney, Bismarckovo súostrovie, Bougainville a Buka zo Šalamúnových ostrovov a asi 600 menších ostrovov
- 5) zahŕňa Šalamúnove ostrovy (okrem Bougainville a Buka), vrátane ostrovov Ontog, Jáva, Rennel a Santa Cruz

Notes to Europe:

- 1) The European portion of Turkey is included in Asia
- 2) Year 2000
- 3) Excluding Faeroe Islands and Greenland
- 4) Excluding Overseas Departments, namely French Guiana, Guadeloupe, Martinique and Réunion
- 5) Including Gozo and Comino Islands
- 6) Including the Azores and Madeira Islands
- 7) Excluding Channel Islands and Isle of Man
- 8) Including the Balearic and Canary Islands and Alhucemas, Ceuta, Chafarinas, Melilla and Penon de Vélez de la Gomera

Notes to Asia:

- 1) The European portion of Turkey is included in Asia
- 2) Year 2000
- 3) Excluding Hong Kong and Macao
- 4) Including data for the Indian held part of Jammu and Kashmir, the final status of which has not yet been determined
- 5) Including East Timor
- 6) Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967
- 7) Comprising Hokkaido, Honshu, Shikoku, Kyushu
- 8) Excluding data for Jordanian territory under occupation since June 1967 by Israeli military forces
- 9) Excluding data for Jammu and Kashmir, the final status of which has not yet been determined, Junagardh, Manavadar, Gilgit and Baltistan
- 10) Comprising 7 sheikdoms of Abu Dhabi, Dubai, Sharjah, Ajman, Umm al Qaiwain, Ras al Khaimah and Fujairah, and the area lying within the modified Riyadh line as announced in October 1955

Notes to Afrika:

- 1) Year 2000
- 2) Including the enclave of Cabinda
- 3) Excluding Mayotte
- 4) Excluding Rodrigues and other small islands
- 5) Comprising Bioko and Rio Muni

Notes to America:

- 1) Hawaii, a state of the U.S.A., is included in America
- 2) Year 2000
- 3) Excluding Indian jungle population
- 4) Excluding nomadic Indian tribes
- 5) Including Carriacou and other dependencies in the Grenadines
- 6) Including Bequia and other islands in the Grenadines

Notes to Oceania and World:

- 1) Year 2000
- 2) Including Christmas, Fanning, Ocean, Washington Islands
- 3) Including Campbell and Kermadec Islands as well as Antipodes, Auckland, Bounty, Snares, Solander and Tree Kings island, all of which are uninhabited
- 4) Comprising eastern part of New Guinea, the Bismarck Archipelago, Bougainville and Buka of Solomon Islands group and about 600 smaller islands
- 5) Comprising the Solomon Islands group (except Bougainville and Buka), Ontong, Java, Rennel and Santa Cruz Islands.

X.1 Elections to the Bodies of Self-government Regions

Methodological notes

The legal base for the **elections to the bodies of self-government regions** is the Law No 303 on Elections to the Bodies of Self-government Regions and the amending of the Civil Procedure Code from July 4, 2001. Elections were declared by the Chairman of the National Council of the Slovak Republic by the Decree No 320 from August 17, 2001. Elections were held on Saturday December 1, 2001. On the basis of the results of elections held in December 1, 2001 the Chairman of the National Council of the SR declared 2nd turn of the elections in December 15, 2001.

According to the Law on Elections to the Bodies of Self-government Regions the Statistical Office of the Slovak Republic is responsible for issuing the methodology of processing elections results and the processing of elections results.

Next abbreviations for the names of political parties and political movements are used in published results:

Abbreviations	Name of political party or movement
ANO	Alliance of New Citizen
DS	Democratic Party
HZDS	Movement for the Democratic Slovakia
KSS	Communist Party of Slovakia
KDH	Christian Democratic Movement
SDL	Party of the Democratic Left
SDKÚ	Slovak Democratic and Christian Union
SDSS	Social Democratic Party of Slovakia
SMER	Course
SMK-MKP	Party of Hungarian Coalition – Magyar Koalíció Pártja
SNS	Slovak National Party
SOP	Party of Civil Understanding
STRED	Party of Democratic Centre

SZS
P SNS
NEKA

Green Party on Slovakia
Right Slovak National Party
Independent candidate

Definitions

Number of registered entitled voters is the total number of persons, who can vote to the bodies of self-government regions according to the law. They are citizens of the Slovak Republic and foreigners residing permanently in a municipality belonging to the area of self-government region or residing permanently in military districts, which belong to the area of self-government region for purpose of elections and they are 18 years old and older in the day of elections.

Number of voters with distributed envelopes is the total number of voters, who in the day of elections came into the corresponding polling station and whom were given envelopes and ballots by the ward election committee.

Definitions

Registered persons are persons, who can vote to the National Council of the Slovak Republic according to the law. They are citizens of the Slovak Republic, they are 18 years old and older in the day of elections and who stay at the area of the Slovak Republic in the elections day.

Number of voters with distributed envelopes is the total number of voters, who in the day of elections came into the polling station and whom were given envelopes and ballots by the ward election committee.

Valid votes are all valid ballots delivered for political parties or coalitions.

Share of valid votes is calculated from the number of valid votes for all political parties or coalitions and the number of developed envelopes.

Share of valid votes for individual political party or coalition is calculated from the number of valid votes delivered for the corresponding political party or coalition and the total number of valid votes delivered for all political parties or coalitions.

Number of mandates is the number of places in parliament, which were allocated to the corresponding political party or coalition at the base of valid votes number obtained in elections.
